

JOINING UP GOVERNMENTS

EUROPEAN
COMMISSION

By Adam Arndt

The Digitaliser.dk metadata management infrastructure

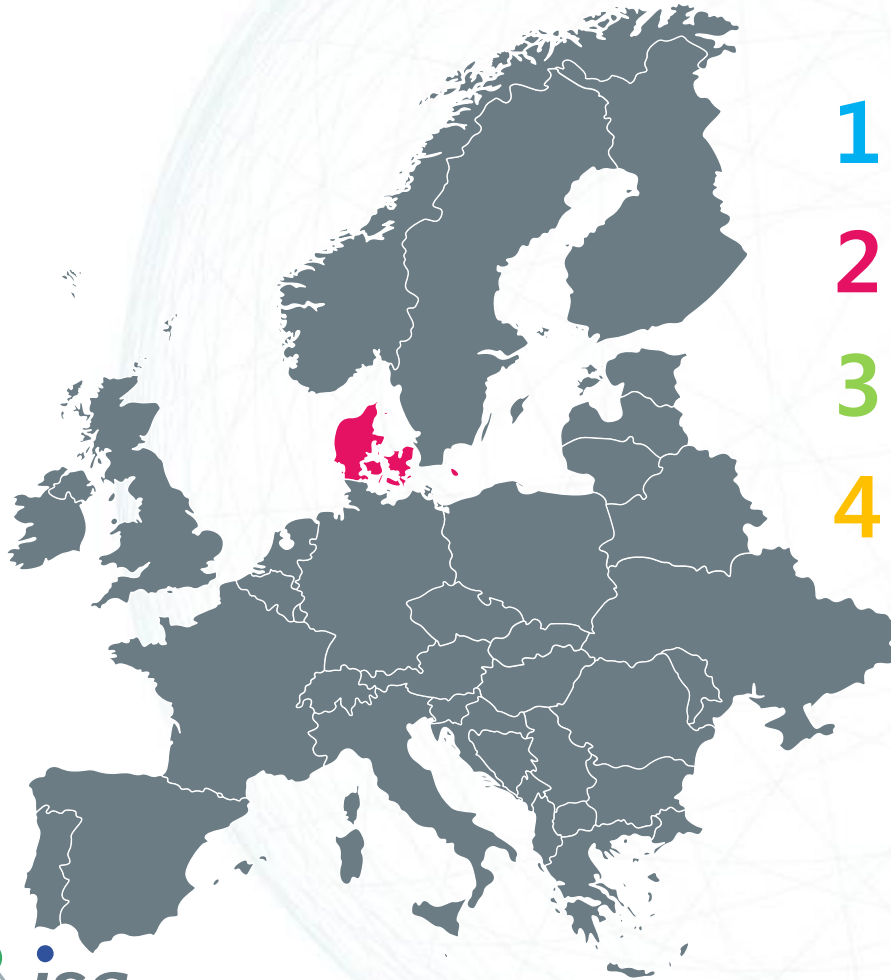

AGENDA

1 CONTEXT

2 IMPLEMENTATION

3 STATE OF PLAY

4 NEXT STEPS

NUMBERS

- 5.474 registered users
- 169 registered software assets
- 746 registered data sources
- 17.489 registered xml-schemes
- 236 registered standards

The screenshot shows the Digitaliser.dk website. At the top, there's a navigation bar with links: Forsiden, Kataloger, Grupper, and Netværk. Below this, a breadcrumb trail says "Du er her : Digitaliser.dk". The main content area features a large article titled "Se nyhedsbrevene her" with a sub-header "Månedens der gik". To the right, there's a section for "Nyhedsbrev" with the text "Om Digitaliser.dk". Below the main article, there's a section for "Seneste indhold" (Latest content) with a list of recent updates, including one by Joachim Eriksson about a standard for person data. On the right side, there's a profile section for "Månedens stemme uge 1" (Voice of the month week 1) featuring a photo of Christian Lannig.

OWNER

- Danish Agency for Digitisation

TARGET AUDIENCE

- IT practitioners
- Public administrations
- Private sector

GOALS

- Cooperation of public and private parties
- Social networking platform
- Produce and store content
- Share with others and get inspired by others (knowledge, content and ideas)

BUDGET

- Dev: ~€2 mill
- Ops: €40 k/y
- Mnt: ~€50 k/y

IMPLEMENTATION 2

Legal

- **Sharing and re-use** is not enforced.
- Semantic assets are **free to use, redistribute, and modify**.
- Application of **copyright law**.

Organisational

- **National level** with **no policy domain restriction**
- **Any user** can upload and download assets
- There is **no formal process to assess** assets
- **Quality assurance** by appreciation of **community** of users.
- Language: **Danish**

Semantic

- **Semantic AND technical** interoperability layers.
- “**human-readable only**” (pdf),
- “**machine-readable only**” (CSV)
- “**human- and machine readable**” (XML, RDF, OWL)

Technical

- Server: **Microsoft IIS/6.0** (Web Server) and **Windows 2003** (OS).
- Programming language: **ASP.NET**.
- Authentication and autorisation: **SSL/HTTPS**
- Interfacing: **API** (RESTful)
- Metadata: **JSON** and **XSD**

STATE OF PLAY³

NUMBERS

- **5.474** registered users
- **169** registered software assets
- **746** registered data sources
- **17.489** registered xml schemas
- **236** registered standards

USAGE

- **Download** software assets, xml-schemes, data sources and standards
- **Upload** software assets, xml-schemes, data sources and standards
- Give **feedback**
- **Share** on social media

USAGE MEASUREMENT

- Number of **registered users**
- Number of **registered software assets**
- Number of **registered data sources**
- Number of **registered xml-schemes**
- Number of **registered standards**
- Number of **“likes” and “dislikes”**
- Number of **feedback entries**

STATE OF PLAY³

Exploitation of many channels and social networks

NEXT STEPS⁴

What went well?

NEXT STEPS⁴

What could be improved?

NEXT STEPS⁴

ADMS and Federation of Semantic Assets Repositories

ADMS ADDED VALUE

1. Discoverability of Digitaliser.dk content
2. Increase **re-use** of Digitaliser.dk
3. Increase **interoperability** of public and private IS
4. **Common description** of Digitaliser.dk content

FUTURE PLAN

1. Map Digitaliser.dk internal data model to ADMS
2. Describe Digitaliser.dk content using ADMS
3. Open interface (API) for extraction of ADMS metadata
4. Make content available in a central repository (Joinup)
