ISA²

European Location Interoperability
Solutions for e-Government

*Enabling Digital Government through
Geospatial and Location Intelligence*

What is ELISE?

A BIT OF HISTORY...

- 2004**
IDABC: Interoperable Delivery of European eGovernment Services
- 2010**
ISA: Interoperability solutions for public administrations
Actions:
EULF
ARE3NA
- 2016**
ISA²: Interoperability Solutions for European Public Administrations, Businesses and Citizens
ELISE
- 2021**
DIGITAL: Digital Europe Programme

ELISE builds upon the outcomes of the former ISA actions EULF and ARE3NA. It is the only action of the ISA² Programme, aiming to improve Digital Government through Location Interoperability.

WHAT?

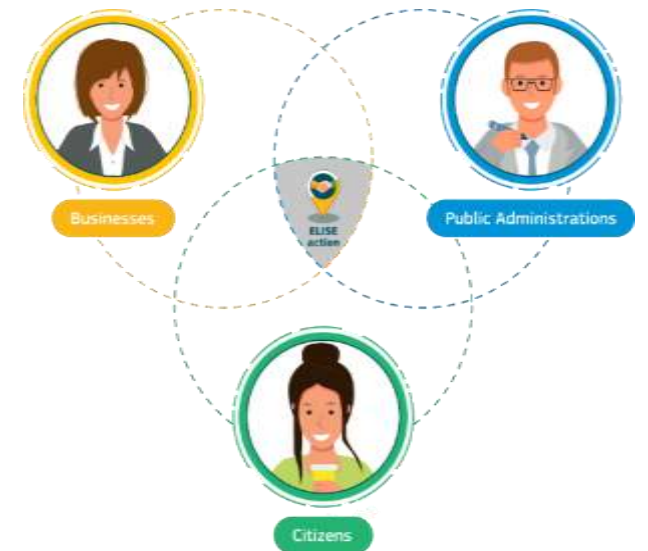

ELISE stands for **E**uropean **L**ocation **I**nteroperability **S**olutions for e-Government. It is one of the more than 50 actions in the European Interoperability Programme ISA2

WHAT FOR?

To support Digital Government Transformation by making the best use of location data and technologies in an interoperable manner

FOR WHOM?

For all: citizens, businesses and public administrations

ELISE action objectives

ELISE action

Policy support

Supporting different policy initiatives at European and national levels

Interoperable frameworks and solutions

Providing reusable interoperable cross-border and cross-sector frameworks and solutions for public administrations, business and citizens

Emerging trends and technologies

Discovering how emerging trends and technologies enable more effective use of location data for policy and digital public services

Building a Knowledge base

Building a Geo-Knowledge base to inform and train stakeholders and promote the adoption of good practices and innovations in location data

ELISE outputs and topics

STUDIES

APPLICATIONS

FRAMEWORKS AND SOLUTIONS

*Improving
knowledge transfer
across organisations
using knowledge
graphs*

What we will cover today

1. Introduction: key concepts and definitions (10')

2. Knowledge Graphs: what are they and how can they be used? (20')

3. Managing key concepts in a glossary or vocabulary (10')

4. Experimenting with Knowledge Graph in ELISE Action(20')

5. Conclusions and future outlook (15')

6. Discussion, Q&A (15')

Key messages

- 1 The **ELISE universe** contains a rich portfolio of resources of different kind: studies and its reports; events and its announcements, recordings and summary reports; webinars and e-learning modules, and much more
- 2 These resources must be managed and used to **transfer knowledge** and experience. They can be treated as semantic assets and represented as **Knowledge Graphs**. Such graphs can be queried and analysed to better understand the universe.
- 3 Exploiting the ELISE universe using **semantic, Machine Learning, Natural Language Processing** and other techniques can provide powerful insights and guide learners to understand and exploit

bigthink.com

stangardfield.medium.com

Objectives of the work on the ELISE Knowledge Graphs

Objective 1

To **investigate and experiment** with **Knowledge Graph** methodologies and techniques in order to get results and formulate recommendations that any organization or initiative can apply

Several JRC
teams involved
XX
organisations

digital-skills-jobs.europa.eu

Objective 2

To perform a consolidated exercise at the moment of ELISE closure of which the results can be taken into account in the activities under the **Digital Europe Programme**.

Introduction

***Exploring the ELISE universe
Key concepts and definitions***

What is the ELISE universe?

The ELISE Action has generated and made available a **portfolio of studies, guidelines, tools, webinars, training materials** ... The Action has organized events and brought together partners and stakeholders to co-create and **share knowledge** to location-enable decision making, to improve interoperability and to create innovative public services ... ELISE covers many technological and technological aspects of DGT

How can I find my way throughout this rich universe?

Exploring the ELISE universe

What will I learn?

What are related concepts?

What is the optimal learning path

ELISE concepts and resources

ELISE concepts. Are single or multiple words describing a theory, method, technology, solution, service ... They are well-defined and/or described, might have an acronym and are used consistently throughout one or more ELISE resources.

ELISE resources. any output/result from ELISE activities under the ELISE Action. Examples are reports, videos, webinar presentations, infographics, tools, etc.

Knowledge management and transfer

Knowledge Transfer. A process by which knowledge, ideas and experience move from the source of knowledge to the recipient of that knowledge. Knowledge transfer and knowledge sharing are often used interchangeably in literature.

Schwartz and Te'eni, 2011

In the context of EQF, knowledge is described as theoretical and/or factual

<> Skills, Competences

Knowledge Management is the process of capturing, distributing, and effectively using knowledge.

Davenport, 1994

2

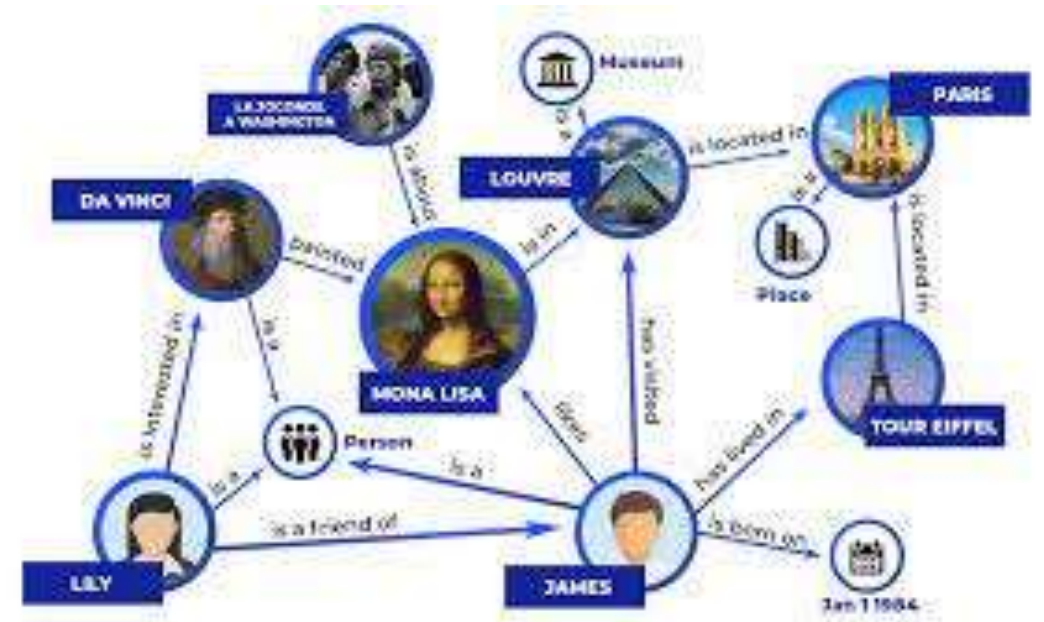

Knowledge Graphs: what are they and how can they be used?

Semantic web, semantic assets and KG

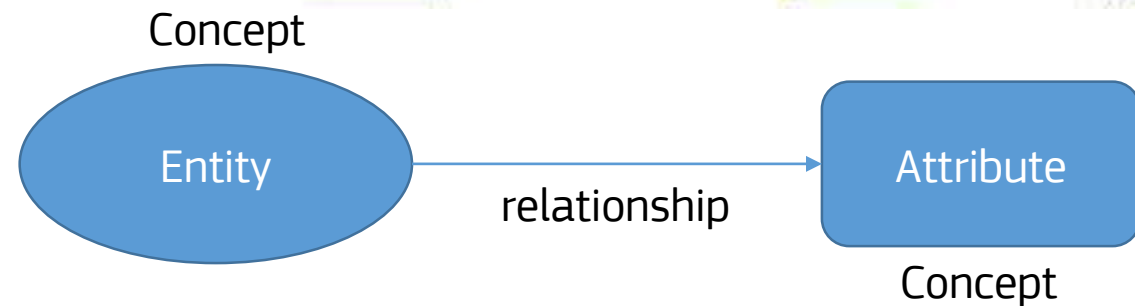

thetechbrook.com

The heart of the **knowledge graph** is a knowledge model: a collection of interlinked descriptions of **concepts, entities, relationships and events**. Knowledge graphs put data in context via linking semantic metadata and provide a framework for data integration, unification, analytics and sharing

medium.com

Architecture of KG's

Pan et al., 2017

Knowledge acquisition

a set of concepts and categories in a subject area or domain that shows their properties and the relations between them

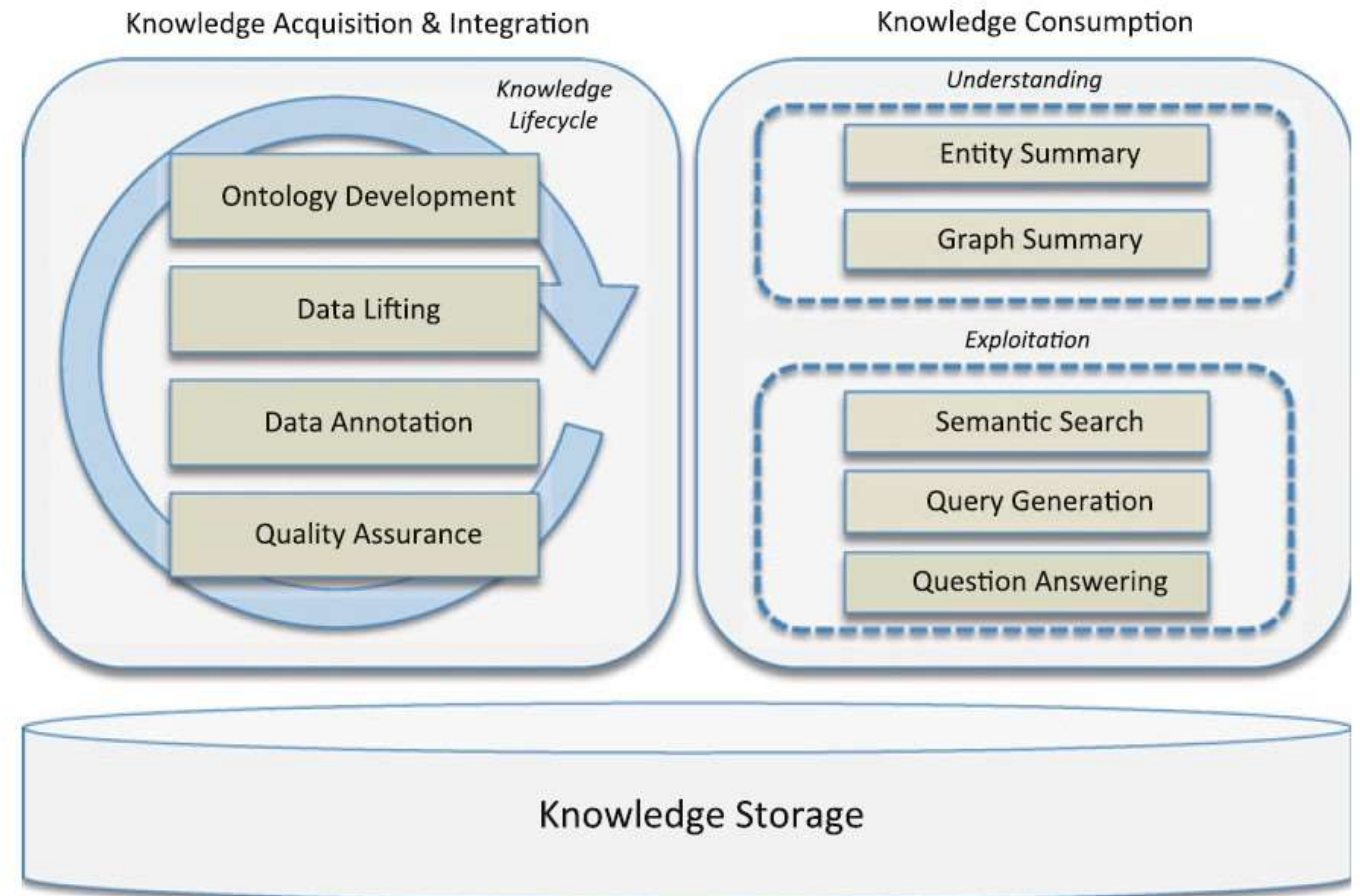

from published raw data to interlinked semantic data

Oxford Dictionary

Knowledge consumption

Overviews in the form of lists and graphs

Knowledge graphs can be used for a large number of tasks — be it for logical reasoning, explainable recommendations, complex analysis or just being a better way to store information

Case Study:

Open Government: Areas of work

Public participation of citizens in local decisions and in the creation of legislation, based on open data

Transparency in all activities done by the local administration, based on open data

Technical and conceptual means to support the open data policies of the local administrations, including open data publication

+

Catalogue of vocabularies and common data structures to homogenise open data published by local administrations

Why do we need ontologies for open data publication?

- However, when we provide open data, wouldn't it be good to publish following the same data structures?

I want to publish my data

Publish
Extract

I use GTFS

A bit of history.. FEMP – 40 datasets (2019)

Conjuntos de datos a publicar en abierto por las EE.LL

 Agenda municipal alcaldía y personal directivo	 Agenda de actividades y eventos	 Aparcamientos públicos	 Avisos, sugerencias, quejas y reclamaciones	 Bicicleta pública
 Calidad del aire	 Callejero oficial del Ayuntamiento	 Censo de locales, actividades, terrazas de hostelería y restauración y licencias de apertura	 Contaminación acústica (día, tarde, noche, industrial, tráfico rodado)	 Contrataciones, licitaciones y proveedores de servicios municipales
 Convenios	 Deuda pública del ayuntamientos	 Equipamientos municipales	 Tráfico	 Instalaciones deportivas (ubicación y uso)
 Lugar de interés turístico	 Padrón municipal: población	 Presupuesto municipal y ejecución presupuestaria	 Puntos de acceso WIFI públicos	 Transporte público

<https://github.com/opencitydata>

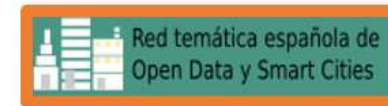

<http://vocab.ciudadesabiertas.es/>

A bit of history.. FEMP – 40 datasets (2019)

 Cartografía municipal	 Accidentes de tráfico	 Contenedores para el reciclaje	 Registro de asociaciones	 Alojamientos, hoteles, alojamientos turísticos y viviendas vacacionales (si tienen competencia municipal)
 Calidad del agua	 Carriles bici/ vías ciclistas/ calles tranquilas	 Alumbrado público (farolas, etc...)	 Subvenciones	 Zonas infantiles y zonas de mayores
 Censo de empresas que pagan impuestos o están obligadas en Entidades Locales (IBI, IVTM, IAE...)	 Facturas	 Censo de vehículos	 Inventario de bienes urbanos y rústicos	 Parques y jardines
 RPT (Relación de Puestos de Trabajo) y trabajadores municipales (concejales, directivos, eventuales, funcionarios, laborales, etc...)	 Licencias urbanísticas y de actividad de locales comerciales	 Gestión de residuos	 Fuentes de agua de beber	 Sanciones y multas

Recommendations for open data governance

What about Zaragoza's knowledge graph?

Espinoza-Arias, P.; Fernández-Ruiz, M.J.; Morlán-Plo, V.; Notivol-Bezares, R.; Corcho, O. The Zaragoza's Knowledge Graph: Open Data to Harness the City Knowledge. *Information* **2020**, *11*, 129. <https://doi.org/10.3390/info11030129>

Where can open data be found in Zaragoza?

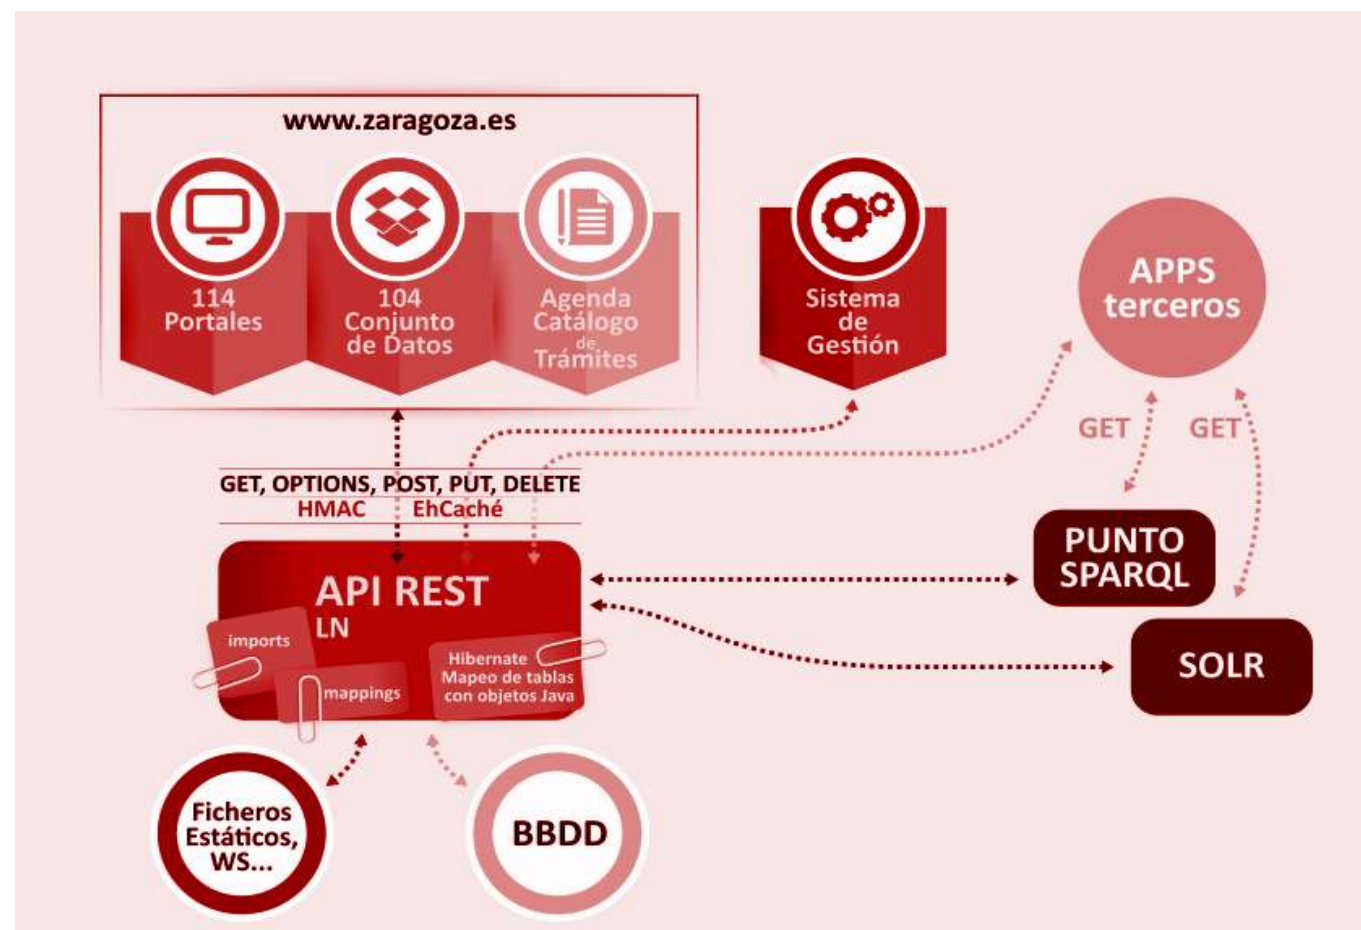

Data API
(consensuated and
normalised)

The screenshot shows the 'Datos Abiertos' website for Zaragoza. At the top, there is a navigation bar with 'Datos Abiertos' and a search bar. Below the header, there is a section titled 'Datos abiertos' with a brief description of the initiative. A 'catálogo de Datos Abiertos' button is visible. The main content area features a navigation menu with options: 'Acceso a API Zaragoza', 'API REST v2', 'SPARQL', 'SQLR', and 'Vocabularios'. Below this is a section 'últimos conjuntos de datos' with four data sets: 'URBANISMO', 'AYUNTAMIENTO', 'PARA LA GENTE', and 'GOBIERNO ABIERTO'. Each set lists specific data types. A 'para reutilizadores' section includes 'Documentación' and 'Aplicaciones'. A 'Regístrate como reutilizador' section provides instructions. At the bottom, 'Indicadores de uso del Portal de Datos Abiertos del Ayuntamiento' shows statistics: 145 Conjuntos de datos, +100.000 Consultas diarias a nuestros datos, +250 Reutilizadores registrados, and +40 Aplicaciones publicadas por reutilizadores. The footer includes 'Ayuntamiento de Zaragoza, 2016' and 'Su copia impresa - Accesibilidad - Menús W3C - Aviso Legal - Política de privacidad'.

Datosabiertos.Zaragoza.es
2008

Technical architecture

A knowledge graph: what for?

The screenshot shows the website 'Conoce y Explora Zaragoza' with a red header and a search bar. The main content area features a large illustration of a person holding a tray with a house icon over a map of Zaragoza. Below this are four interactive panels: 'Datos' (Data), 'Mapas' (Maps), 'Gráficos' (Charts), and 'Cuadros de mando' (Dashboards). At the bottom, there is a section for 'algunos proyectos' (some projects) with two map-based project cards: 'Alojamientos turísticos en Zaragoza' and 'Paseos por la Zaragoza de las mujeres'.

Development of a data space for the city of Zaragoza

Combined use of thematic maps, dashboards, indicators and data generated by the city council

as well as those created by citizens, social agents, etc.

Conoce y Explora Zaragoza Datos Abiertos

Entra en el Catálogo de Datos Abiertos Zaragoza, una iniciativa del Ayuntamiento de Zaragoza para el fomento de la reutilización de la información publicada en su web por parte de la ciudadanía, la empresas y otros organismos, lo que ofrece un aumento de la transparencia de la administración, el incremento de la participación ciudadana y la posibilidad de crecimiento económico de distintos sectores.

Buscar

API Zaragoza

Si quieres reutilizar la información del Ayuntamiento de Zaragoza, ya sea para fines comerciales o no comerciales, puedes hacerlo de las siguientes formas:

API REST v2

Es una herramienta capaz de conectar a las llamadas o una serie de URLs en formato JSON. Ofrece diferentes formatos y operaciones para la consulta de los mismos. Incluye el API de Datos Abiertos de Zaragoza.

SPARQL

Se trata de un lenguaje estandarizado para la consulta de datos almacenados en RDF, normalizado por el RDF Data Access Working Group del W3C. Ofrece a los desarrolladores profesionales una interfaz para consultar los datos.

SOLR

Es un motor de búsqueda de código abierto basado en Lucene y escrito en Java. Es una de las herramientas más populares para integrar motores de búsqueda verticales. Entre sus funcionalidades más importantes se encuentran:

Vocabulario

Main messages for other municipalities

- Open data by default
 - The municipality services are the first reusers of open data
 - The open data portal is not a data graveyard
 - Datasets + APIs
- A proper open data governance
 - Avoid duplication of data across your information systems
 - Knowledge graph principles are key for this (unique identifiers)
 - Processes and people (multidisciplinary teams are essential)
 - Combine data with maps, dashboards, indicators...
- Homogenisation
 - Inside the city (common patterns)
 - Across cities (e.g., as in Ciudades Abiertas and on the FEMP catalogue)

...

Develop the model for the Knowledge Graph (prototype)

Define classes, properties and relations

Adms as base

Extended with existing classes and properties,

Code lists reused or values linked to external resources

Use existing vocabularies:

foaf,
dcat
dc
dct
org
...

Subclassing for new elements

isSubClassOf
isSubPropertyOf

Data lifting: From (semi-)structured data to Knowledge Graph

Define mapping

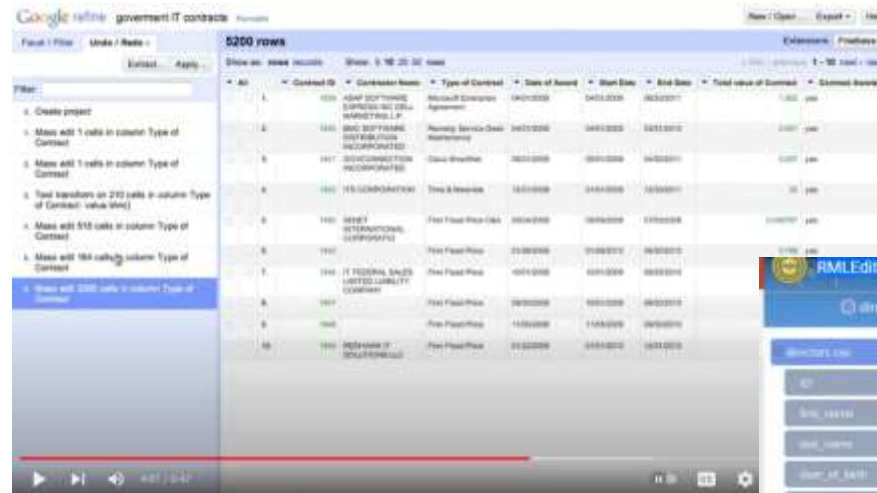

Xlsx -> RDF

Create class instances

Add properties

Create relations

Using a replicable workflow

GUIs, e.g.:
OpenRefine (or OntoRefine)
RMLEditor, RMLWorkbench

Define mapping rules:
YARRRML, RML, R2RML

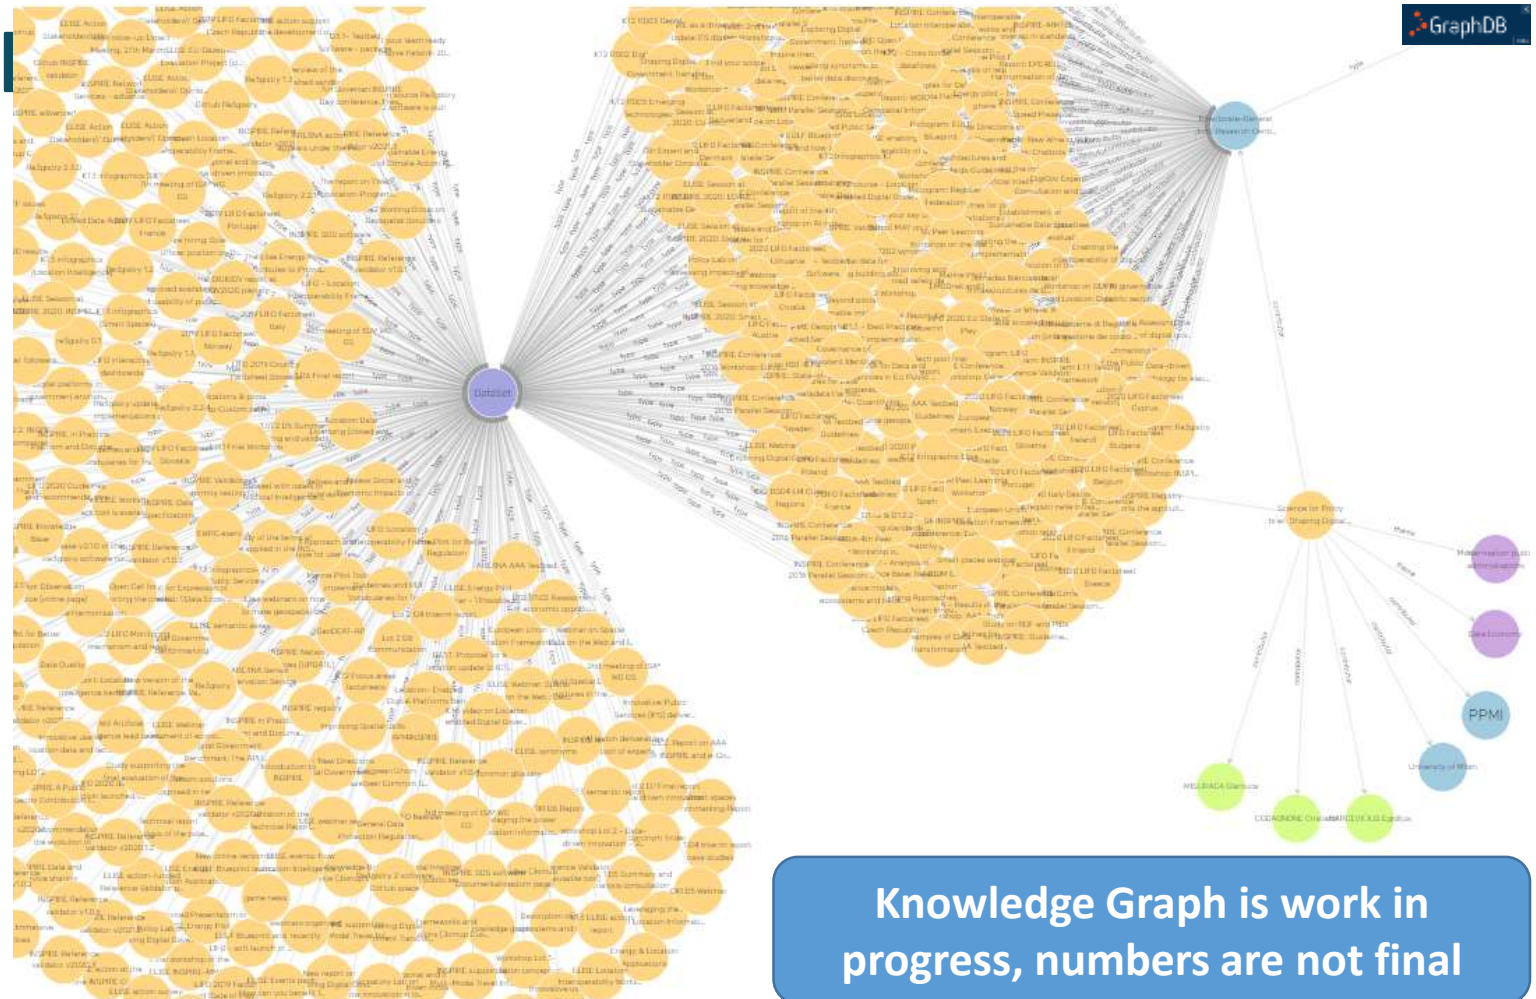

Apply rules (creation of the KG)
RMLMapper, SDM-RDFizer,...

The Knowledge Graph

Outputs: 508
Contributors: 357
Organisations: 191
Topics/Subject areas: 14
Activity types: 53
Case studies: 307
Methodological approaches: 27

Use cases for the Knowledge Graph

Quality assurance

Get all duplicates of contributors or organisations
Get ELISE Outputs without a public name

Entity and Graph summaries

Get number of webinars
Get case studies related to more than one ELISE Output
Get count of Outputs by EIF Layer

Question answering

To what outputs did organisation X contribute
What were the most active Topics in 2020
What policies are not covered by ELISE outputs

Further exploitation

Link to external Knowledge Graphs
Use inference to create new knowledge
Apply ML techniques to further enrich the Knowledge Graph

Example 1

Get outputs without a contributing organisation

Use case: Data validation

Query for missing attributes

SPARQL: query language for Graphs

```

PREFIX skos: <http://www.w3.org/2004/02/skos/core#>
PREFIX rdfs: <http://www.w3.org/2000/01/rdf-schema#>
PREFIX dct: <http://purl.org/dc/terms/>
PREFIX dcat: <http://www.w3.org/ns/dcat#>
PREFIX org: <http://www.w3.org/ns/org#>

SELECT ?output ?label
WHERE
  { ?output a dcat:DataSet .
    ?output dct:title ?label .
    FILTER(NOT EXISTS {?output dct:contributor ?
contributor .
      ?contributor a org:Organization})
  }
  
```

Run

https://joinup.ec.europa.eu/collection/elise-european-location-interoperability-solutions-e-government/kg/output/10	1st meeting of ISA ² WG GS
https://joinup.ec.europa.eu/collection/elise-european-location-interoperability-solutions-e-government/kg/output/20	ELISE Energy Pilot Seminar - 'Possible synergies between energy smart meters, SensorThings API and INSPIRE'
https://joinup.ec.europa.eu/collection/elise-european-location-interoperability-solutions-e-government/kg/output/22	Webinar on Spatial Data on the Web and INSPIRE
https://joinup.ec.europa.eu/collection/elise-european-location-interoperability-solutions-e-government/kg/output/23	ELISE Webinar: Spatial Data on the Web : GeoNetwork's User feedback form - How to make geospatial data more accessible for e-government applications
https://joinup.ec.europa.eu/collection/elise-european-location-interoperability-solutions-e-government/kg/output/24	2nd meeting of ISA ² WG GS
https://joinup.ec.europa.eu/collection/elise-european-location-interoperability-solutions-e-government/kg/output/25	Digital platforms in government environments (Closed event)
https://joinup.ec.europa.eu/collection/elise-european-location-interoperability-solutions-e-government/kg/output/27	Location Data Licensing (closed event)
https://joinup.ec.europa.eu/collection/elise-european-location-interoperability-solutions-e-government/kg/output/28	Pan-European Authoritative Gazetteer Developments (closed event)
https://joinup.ec.europa.eu/collection/elise-european-location-interoperability-solutions-e-government/kg/output/29	3rd meeting of ISA ² WG GS

Queries can also create additional data

- Persons are linked to outputs
- Persons are linked to an organisation
- Use to create link output - organisation

Example 2

Get the number of outputs grouped by policy domain

```

PREFIX skos: <http://www.w3.org/2004/02/skos/core#>
PREFIX rdfs: <http://www.w3.org/2000/01/rdf-schema#>
PREFIX owl: <http://www.w3.org/2002/07/owl#>
PREFIX dcat: <http://www.w3.org/ns/dcat#>
PREFIX demo: <http://www.example.com/demo#>

SELECT ?label (COUNT(?r) AS ?number)
WHERE
{
  ?r dcat:theme ?theme .
  ?theme rdfs:label ?label .
}
GROUP BY ?label ORDER BY DESC (?number)

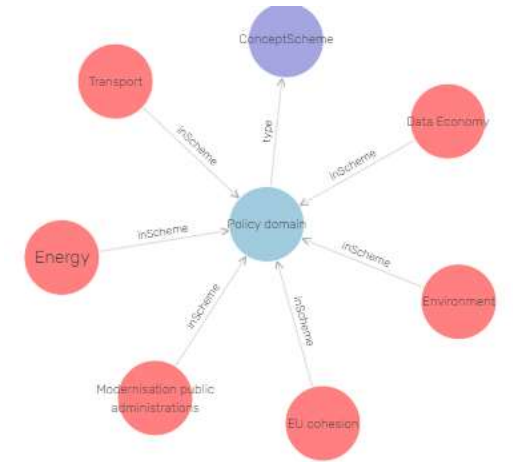

```

Run

■ number

Count by policy domain

An output can have multiple policy domains

	label	number
1	"Modernisation public administrations"@en	"496"^^xsd:integer
2	"Data Economy"@en	"465"^^xsd:integer
3	"Environment"@en	"141"^^xsd:integer
4	"Energy"@en	"31"^^xsd:integer
5	"Transport"@en	"10"^^xsd:integer
6	"EU cohesion"@en	"1"^^xsd:integer

Example 3

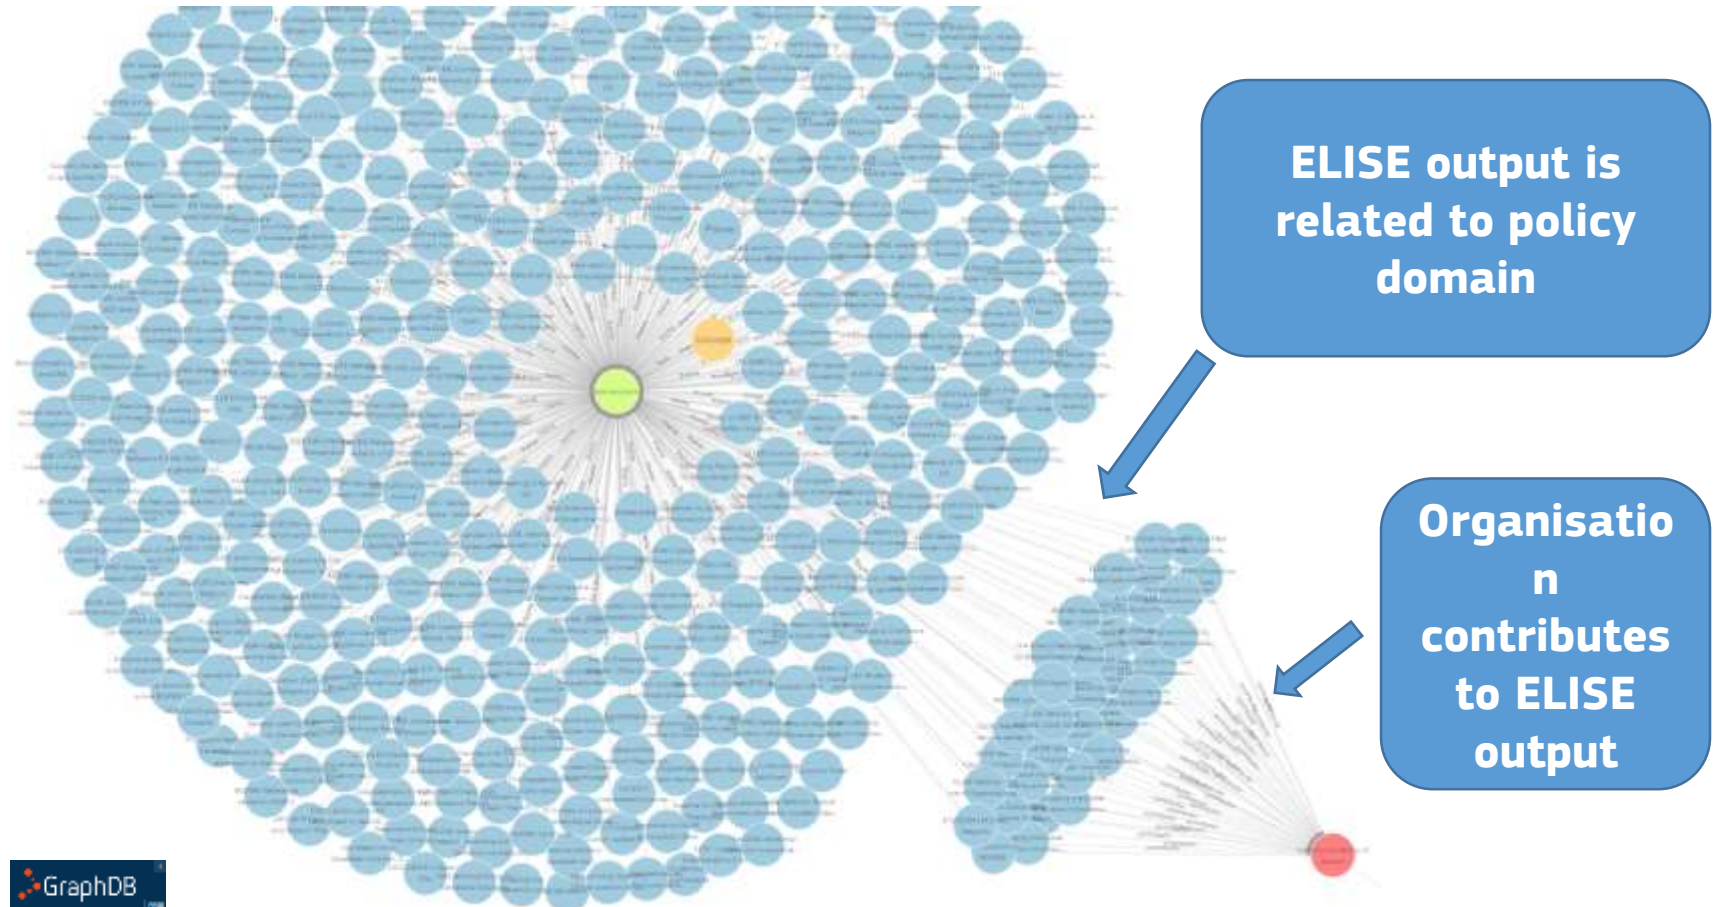

Get the topics covered by organisation X related to policy domain y

Visualisation, (no query executed)

Blue: ELISE output

Green: Policy domain
(example: data-economy)

Red: Organisation
(example: KU Leuven)

5

Conclusions and future outlook

Concluding remarks

For organisations and individuals alike it is a big **challenge to find** their **way through the rich portfolio of** resources generated by **the ELISE Action**. Therefore the use of Knowledge Graphs (KG) for ELISE Knowledge Transfer was investigated and experimented with

Knowledge Graphs can provide an **overview of the ELISE universe**, both graphically and in the form of summary lists. Moreover, KG also allow to **query** the universe, both its content (concepts) as well as the ELISE resources themselves. In that sense they can **support the Knowledge Transfer process**

Ongoing and **future developments** show a huge potential to exploit even better location-enabled digital government – see the **Zaragoza case** - by including more semantic web, as well as Machine Learning and Natural Language Processing techniques – see the **BigKnowledge case**

Future outlook:

***Using Machine Learning and Natural
language processing for Knowledge
Transfer***

Knowledge Management – Recurring Questions

How efficient is your knowledge ecosystem?

Knowledge Management – Spatial Approach

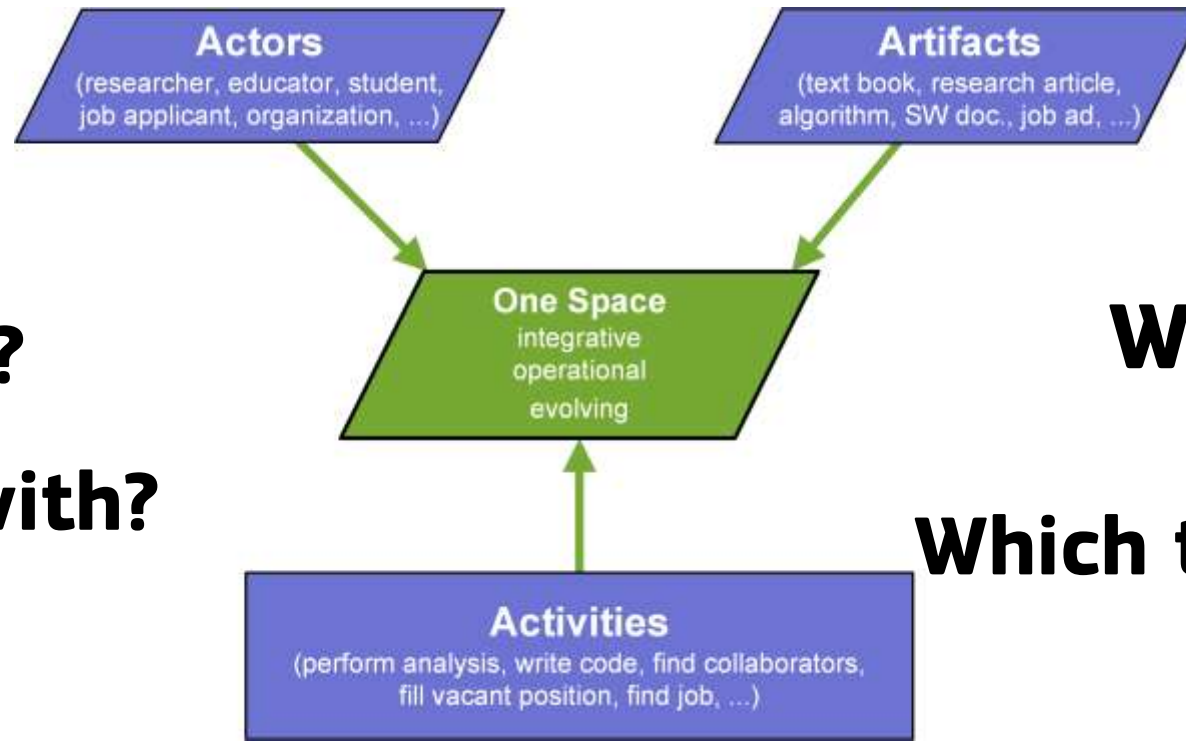

What if there was a reference system & common space?

What to teach?

What to learn?

Who to partner with?

Who should be on this team?

What to read?

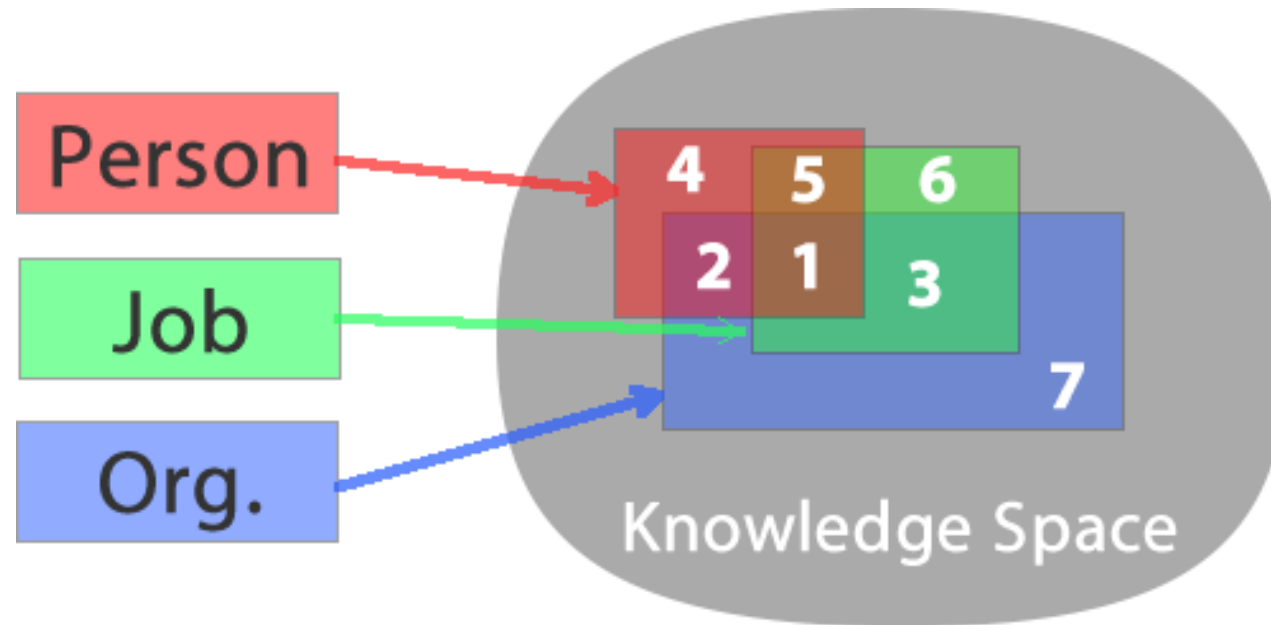

What's emerging?

Which tool for this task?

What's fading?

Knowledge Management – Spatial Approach

What if there was a reference system & common space?

Knowledge Management – Spatial Approach

Inspiration from Geographic Information Science

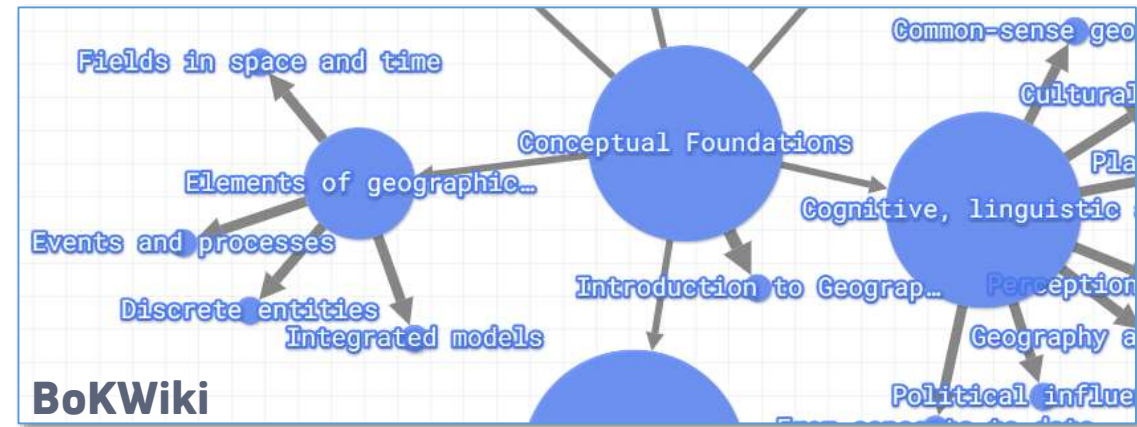

“People Manipulate Objects (but Cultivate Fields)”

Helen Couclelis - 1992

Knowledge Management – Spatial Approach

Inspiration from Geographic Information Science

- Discrete Objects

 - Dimensionality reduction
 - Projection

Knowledge Management – Spatial Approach

Context through Spatial Intelligence

1. those objects or entities which **surround** a focal event.
2. the circumstances that form the **setting** for an event, statement, or idea, and in terms of which it can be fully **understood and assessed**.
3. a **frame** that surrounds the event and provides resources for its **appropriate interpretation**

Scenario: Conference Speakers projected into Management Consulting & Accounting

	<p>RICARDO TREVIÑO CHAPA DEPUTY SECRETARY GENERAL, WCO</p> <p>Ricardo Treviño, Deputy Secretary General of the World Customs Organization, has 20 years of service in the public sector. He started in Mexico's Federal Government at the Institute for Protection of Bank Savings, served as General Director for Revenue Collection at the State of Mexico's Government where revenue collection tripled during his term. He also worked as General Director of the Social Security Institute of the State of Mexico, where he led a legal reform to strengthen the pension system. In 2015, he was appointed by the President of Mexico and ratified by the Senate as Head of Customs.</p>
	<p>DEBBIE FUGATE, Ph.D. DEPUTY DIRECTOR, NATIONAL GEOSPATIAL PROGRAM U.S. GEOLOGICAL SURVEY (USGS)</p> <p>Debbie Fugate is the Deputy Director of the National Geospatial Program (NGP) at the U.S. Geological Survey (USGS). The NGP provides the digital geospatial foundation for the United States, and includes the National Map, the 3D Elevation Program, the National Hydrography Dataset, and the US Topo Map Series. Prior to joining the USGS, Debbie was Deputy Director of the Office of The Geographer and Global Issues at the U.S. Department of State, and also led the Humanitarian Information Unit, an interagency unit that produces written and geospatial analytics. Previously, she served as a demographer for the Central Intelligence Agency, analyzing population trends worldwide.</p>
	<p>CHITRA SIVANANDAM VP ANALYTICS AND SIMULATION, SAIC</p> <p>Chitra Sivanandam is the Vice President for the Advanced Analytics and Simulation Practice within SAIC's Solutions and Technology Group. Prior to SAIC, Chitra served as a strategic investment lead for startups within Raytheon's Advanced Concepts and Technologies group under IIS. Chitra's legacy includes developing and executing growth strategies while at Blackbird Technologies (acquired by Raytheon in late 2014), developing innovation and offerings management strategies at Exelis Geospatial (now Harris) and inserting best of breed commercial technology into intelligence and DoD agencies during her tenure at In-Q-Tel.</p>

Deployment Example: Open Geospatial Consortium (OGC)

Geospatial Technology Explorer

OGC enables innovation in geospatial technology. Geospatial is a complex ecosystem of concepts, technology and products. The Geo Tech Explorer on this page is a tool to understand the geospatial tech landscape. By querying the landscape, the Explorer illuminates these complex interrelationships.

The Explorer tool was constructed using artificial intelligence applied to 100,000+ domain artifacts, e.g., standards, manuscripts, magazines, etc. Select the information icon in the upper right of the explorer for more information. BigKnowledge constructed the Explorer for OGC. See this page for more in-depth description and examples of the tool by BigKnowledge.
