# What we will cover today

1 What is *location interoperability*?

2. Benefits and challenges of location interoperability

3. ELISE Action support to location interoperability: achievements and success stories

4. Recommendations, next steps and perspectives for location interoperability

5. The ELISE Action Final Report

6. Q&A

## A BIT OF HISTORY...

2004

IDABC: Interoperable Delivery of European eGovernment Services

2010

ISA: Interoperability solutions for public administrations

Actions:

EULF  
ARE3NA

2016

ISA<sup>2</sup>: Interoperability Solutions for European Public Administrations, Businesses and Citizens

ELISE

2021

DIGITAL: Digital Europe Programme

ELISE builds upon the outcomes of the former ISA actions EULF and ARE3NA. It is the only action of the ISA<sup>2</sup> Programme, aiming to improve Digital Government through Location Interoperability.

European  
Commission

### WHAT?

ELISE stands for **E**uropean **L**ocation **I**nteroperability **S**olutions for e-Government. It is one of the more than 50 actions in the European Interoperability Programme ISA<sup>2</sup>.

### WHAT FOR?

To support Digital Government Transformation by making the best use of location data and technologies in an interoperable manner

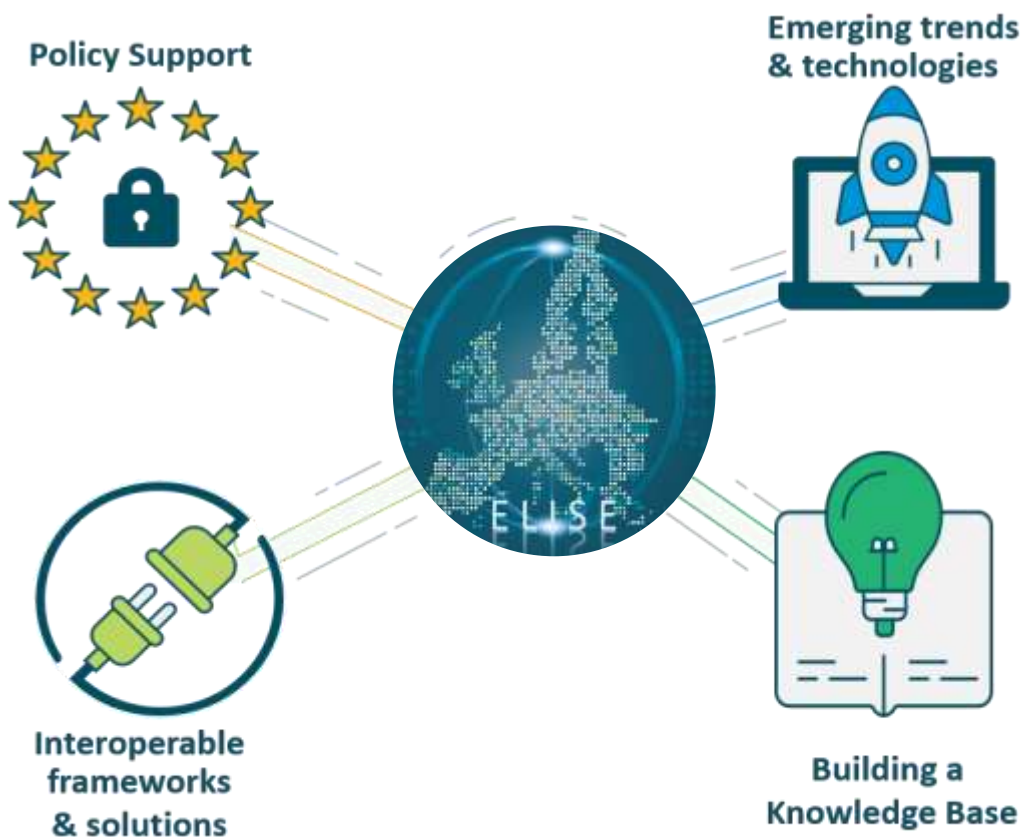

### FOR WHOM?

For all: citizens, businesses and public administrations

ISA<sup>2</sup>

## ELISE's four main objectives:

achieved through different type of **outputs:**

STUDIES

FRAMEWORKS AND SOLUTIONS

APPLICATIONS

GEO KNOWLEDGE  
BASE SERVICE

# ELISE Action stakeholders' community

*ELISE Action Community's Opinion*

## When I think about the ELISE Action...

"Interoperability solutions at different levels and efficient use of digital cross sector data interaction."

**Ouns KISSIYAR**  
Informatie Vlaanderen 

"Bridge between the GIS world and ICT community, between INSPIRE and eGov."

**Martin TUCHYNA**  
Slovak Ministry of Environment 

"Data sets and services harmonisation across Europe."

**Tomaž PETEK**  
Slovenian Surveying, Mapping and Cadastral Authority 

"Location interoperability and use of open standards to support local administrations."

**Ricardo VITORINO**  
ubiwhere

*Location Interoperability?*

1

*ELISE Action Community's Opinion*

## Why is interoperability essential?

It facilitates data integration, reduces work, prevents us from reinventing the wheel, saves time, and increases efficiency."

**Ouns KISSIYAR**

**Informatie  
Vlaanderen**

"It is essential to ensure the access to data across departments and organisations to facilitate data-driven decision making."

**Ricardo VITORINO**  
ubiwhere

" Information should be Findable, Accessible, Interoperable, Reusable, and Ethical."

**Rob VAN DE VELDE**

Geonovum

"Fundamental human aspect of the need to communicate, collaborate and share."

**Agneta ENGBERG**

## What is *Location Interoperability*?

## Why the focus on *location Interoperability*?

**Achieving location interoperability can bring significant opportunities and benefits** for all actors involved, including the public sector, businesses and citizens.

**Interoperability is fundamental in enabling initiatives** such as the European Digital Identity Wallet to work. Systems and devices exchange and make use of data coherently and consistently.

**Location data** facilitates governments in making data-driven decisions and improving communication through different methods.

*ELISE Action Community's Opinion*

## The role of 'location' in achieving interoperability

"80 % of all information is related to position or location. Government interoperability solutions need interoperable location data."

**Morten BORREBAEK**  
Norwegian Mapping Authority 

"Location is an important identifier which brings together all things you know. Lowering the threshold to reuse location on any device and application."

**Rob VAN DE VELDE**  
Geonovum 

"If one ignores the location aspect of data, there is a risk to make uninformed decisions."

**Gobe HOBONA**  
 Open Geospatial Consortium

"Location and time are essential."

**Ricardo VITORINO**  
ubiwhere

# 2

## **Benefits** and **challenges** in achieving location Interoperability

*ELISE Action Community's Opinion*

## Opportunities and innovative approaches by using interoperable location data

"Cooperation across all levels and sectors can be facilitated by Smart Spaces."

**Ouns KISSIYAR**  
Informatie Vlaanderen 

"To start experimenting with solutions and workflows that bring AI and Machine Learning approaches together."

**Gobe HOBONA**

"Applying innovative approaches in including location-based data and services supporting future Digital Economy."

**Tomaž PETEK**

Slovenian Surveying,  
Mapping and  
Cadastral Authority

"APIs can handle location and non-location information together and can be used in general eGov solutions."

**Morten BORREBAEK**

Norwegian  
Mapping  
Authority

# Benefits from location interoperability

- New and more **effective public digital services**
- Improved **access** to information
- Improved **cross-border collaboration**

- **Economic** and **financial** benefits
- Better support to the **policy lifecycle**
- Improved **spatial awareness** and **analytical skills**

# Benefits from location interoperability

 Agricultural Subsidy Compliance

 Monitoring Guimarães Urban platform

 FAIRway project

 Metropolitan Housing Observatory

 Amsterdam Smart City PPP

 ESRI Platform

 The Port of Rotterdam

 KLIP platform

 Locator tool for cross border investment

 Galigeo crime prediction platform

*ELISE Action Community's Opinion*

## Location interoperability success stories

"KLIP – inspired by a Dutch initiative. Avoid accidents by making underground interoperable."

**Ouns KISSIYAR**  
Informatie Vlaanderen 

"Having standards and compliance testing tools is key to success."

**Gobe HOBONA**

"Optimising location data in the public sector issuing building permits."

**Tomaž PETEK**

Slovenian Surveying,  
Mapping and  
Cadastral Authority

"Prešov region – sharing and using of data, and showing the examples how to use them."

**Martin TUCHYNA**

Slovak Ministry  
of Environment

# What are the **remaining challenges** hampering achieving location Interoperability?

- **Fragmented data provision**
- **Lack of harmonisation**
- **Hesitance to invest** due to high initial costs
- **Lack of standardised licensing schemes** is costly
- Differences in **data sharing cultures**
- **Insufficient level of cooperation** between different stakeholders
- **Concerns** among **involved stakeholders** regarding data privacy
- **Lack of a consistent European framework** to integrate different ecosystems
- Need to **ensure alignment** of **interoperability policies and initiatives** and create synergies
- Focus on **user capacity** and **needs** in innovative solutions

*ELISE Action Community's Opinion*

## Gaps and barriers in achieving location interoperability

"Lack of knowledge and capacities on national and EU levels."

**Agneta ENGBERG**

"Cross community glossary harmonisation."

**Gobe HOBONA**

"The difference in pricing policies in EU member states."

**Tomaž PETEK**

Slovenian Surveying,  
Mapping and  
Cadastral Authority

"Everything starts at the local level."

**Ricardo VITORINO**  
**ubiwhere**

# Location Interoperability supported by the ELISE Action

# 3

*ELISE Action Community's Opinion*

## Benefits from the ELISE Action

"We learn from each other, we inspire each other - stone of European community."

**Rob VAN DE VELDE**

Geonovum

"Build on what ELISE Action has done, for example, identifying future technology trends and how the community should address them."

**Gobe HOBONA**

"Compare national realities with the European context. Knowledge transfer activities."

**Martin TUCHYNA**

Slovak Ministry  
of Environment

"Blueprint recommendations through which EIF is applied in the location context."

**Morten BORREBAEK**

Norwegian  
Mapping  
Authority

# ELISE Action's **key achievements**

The ELISE Action has reached numerous accomplishments during its five years of activity, among which:

Complementing the **EIF and National Interoperability Framework Observatory**

**Putting the INSPIRE Directive into practice** with tools for data providers

Building an **extensive stakeholder community**

**Raising awareness** on new approaches to location-enabled digital transformation

Helping in the **assessment of the roles of SDIs**

Assessing **new policies and technologies**

**Promoting and facilitating** links on location data between public and private

**Providing guidance** to improve spatial awareness and analytical skills for the best use of data

**Developing key interoperability frameworks**

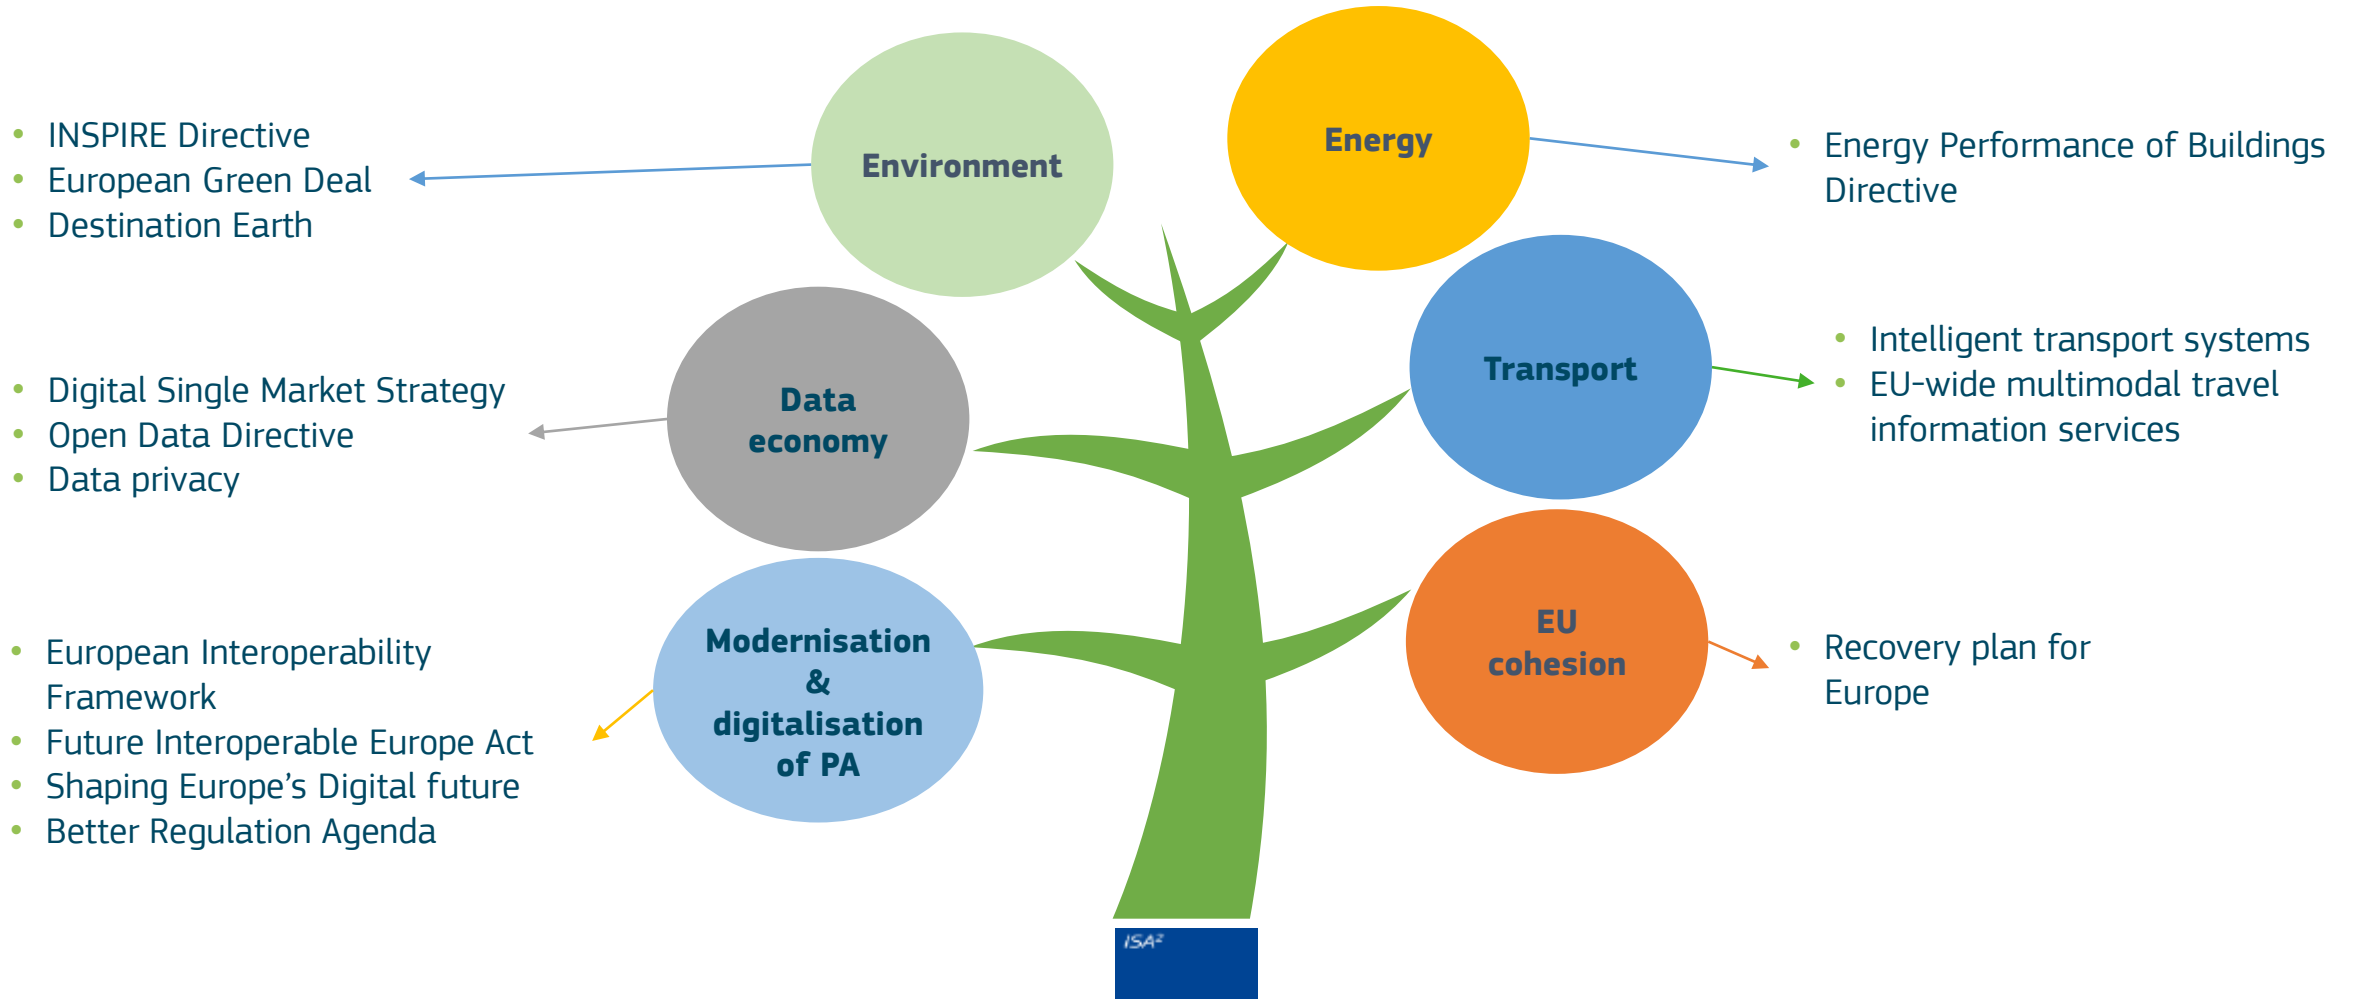

Putting in place a **knowledge base** for a wide variety of stakeholders

# 3

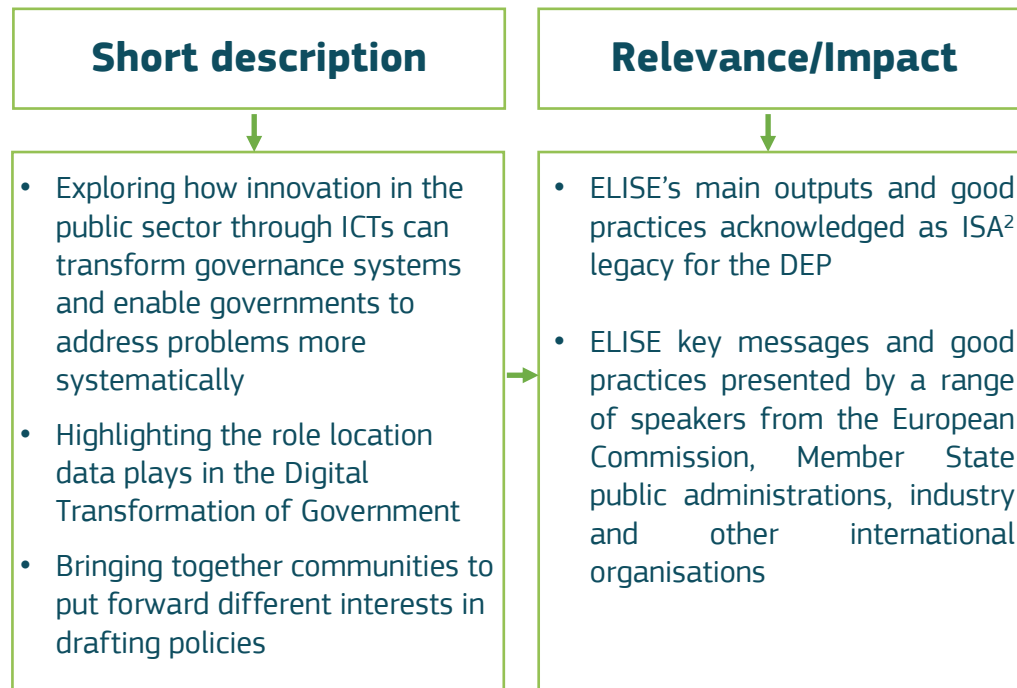

## Policy Support

# Policies supported by the ELISE Action

# Location enabled digital government and digital government transformation

# Support to the Digital Single Market

## Short description

- ELISE supported the goals of the DSM strategy and ensured better access for consumers and businesses to online goods and services across Europe.

## Relevance/Impact

- Assessment of the usability barriers
- Identification of usability barriers to Inspire terms of use
- Identification of opportunities from geodata marketplaces
- Establishing concrete approaches to modernise how SDI data is shared under the INSPIRE Directive
- Identification of opportunities and challenges of collaboration for geospatial services

# ELISE cross-border/trans-national pilots

ELISE has developed **cross-border pilots** - sandboxes that explored the most effective ways of using location information to develop efficient policies - and applications to test location data interoperability principles in the following sectors:

## Energy efficiency

## Transport

## Marine

## Cultural heritage

Scope

<ul style="list-style-type: none"> <li>• Common structured data models</li> <li>• Data access agreements</li> <li>• Common data access mechanisms</li> <li>• Centralised and distributed ICT infrastructures</li> </ul>	<ul style="list-style-type: none"> <li>• Up-to-date flow of road safety data</li> <li>• Agreement between road authorities and commercial map providers in Norway and Sweden</li> <li>• Guidance on linear referencing and exchange standards</li> </ul>	<ul style="list-style-type: none"> <li>• Requirements analysis to link INSPIRE and MSFD</li> <li>• MSFD spatial data requirements mapped to INSPIRE data models</li> <li>• Recommendations for the alignment of EMODnet and INSPIRE</li> </ul>	<ul style="list-style-type: none"> <li>• Evaluate the feasibility of using existing Pan European Gazetteer solutions to satisfy users' requirements in terms of lining location with place names and vice versa respecting</li> </ul>
---	--	--	---

Perspectives

<p>More sandboxing activities can bring the prototype methodologies and tools developed in the use cases to a more mature level of solutions.</p>	<ul style="list-style-type: none"> <li>• More sandboxing on: value of timely road safety updates</li> <li>• Public road authorities to maximise their data processing efficiency</li> <li>• Effective data sharing between public and private</li> </ul>	<ul style="list-style-type: none"> <li>• Explore how existing location-enabled frameworks, such as INSPIRE, can be used to streamline eReporting between national and EU level administrations.</li> </ul>	<ul style="list-style-type: none"> <li>• Explore through use cases the implementation and use of a EU gazetteer common service.</li> </ul>
---	--	--	--

# Success story

## ELISE- Supporting EIF monitoring & Interoperable Europe Policy

**Miguel ÁLVAREZ RODRÍGUEZ**

*European Commission,  
DG DIGIT*

# European Interoperability Framework (EIF): overarching and hosting domain frameworks such as location (EULF Blueprint)

The EIF is an agreed approach to the delivery of interoperable European digital public services, with a set of interoperability guidelines in the form of common principles, models and recommendations.

**Legal Context**

The EIF is promoted and maintained by the **ISA<sup>2</sup> programme** in close **cooperation between the Member States and the Commission** calling for the establishment of **interoperable trans-European networks that will enable citizens to derive full benefit from a European internal market.**

**Objectives**

Inspire European public administrations in their efforts to **design and deliver seamless European public services** which are to the extent possible, digital-by-default, cross-border by-default and open-by-default; **fostering cross-border and cross-sectoral interoperability**

**Scope**

The EIF is a **generic framework applicable to all public administrations in the EU**, composed of 12 principles, 4 layers, a conceptual model, and 47 recommendations across these 'pillars' of the framework

## EULF BLUEPRINT

Promotes policy alignment in use of location data

Addresses these objectives in the context of location data

Linked to the EIF recommendations and illustrated with best practices from all levels of government

INSPIRE:  
Inspiration for EIF

### 2.3 Underlying principle 2: openness

In the context of interoperable public services, the concept of **openness** mainly relates to data, specifications and software.

Open government data (here simply referred 'open data') refers to the idea that all public data should be freely available for use and reuse by others, unless restrictions apply e.g. for protection of personal data, confidentiality, or intellectual property rights. Public administrations collect and generate huge amounts of data. The [Directive on the reuse of public sector information \(PSI\) \[7\]](#) encourages Member States to make public information available for access and reuse as open data. The [INSPIRE Directive \[8\]](#) requires, in addition, sharing of spatial datasets and services between public authorities with no restrictions or practical obstacles to its reuse. This

# The *National Interoperability Framework Observatory* (NIFO)

NIFO publishes the most up-to-date information on the state-of-play of digital public administration and interoperability (LIFO is a complementary observatory on location interoperability).

NIFO provides support and guidance to European national administrations to facilitate the alignment of their National Interoperability Framework (NIF) with the European one (EIF)..

NIFO fosters engagement activities with European public administrations such as workshops and webinars, so as to create a community of practice.

**NIFO**

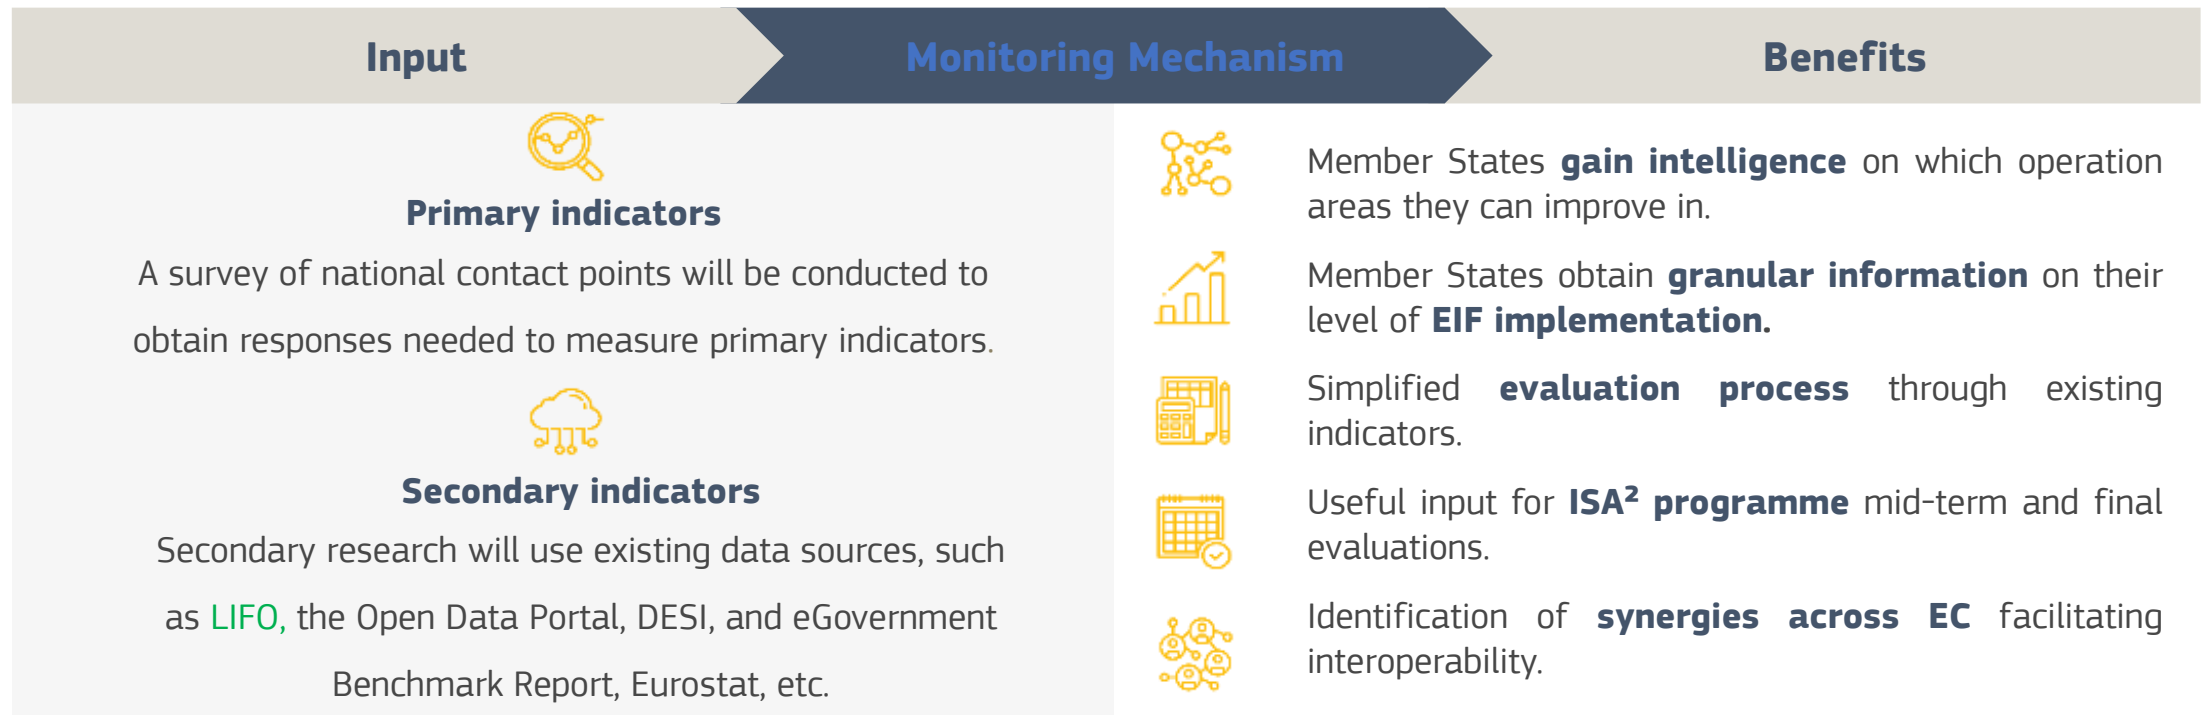

NATIONAL  
INTEROPERABILITY  
FRAMEWORK  
OBSERVATORY

*The main mission of NIFO is to monitor the implementation of the revised version of the **European Interoperability Framework** (EIF) and to help foster the capacity building policy and **modernisation of public administrations**. By doing so, it aims at becoming an online community of practice and the prime source of information regarding digital public administration and interoperability matters within Europe.*

# Introduction to the EIF Monitoring Mechanism: linking LIFO KPIs

The EIF Monitoring Mechanism's (EIF MM) goal is to provide each Member State with its level of implementation of the EIF based on a recommendation-by-recommendation measurement as defined by the Article 1.2 of the ISA<sup>2</sup> Decision stating that "the Commission, through the ISA<sup>2</sup> programme, shall monitor the implementation of the EIF".

# The **EIF Toolbox**: Linked to EULF Blueprint

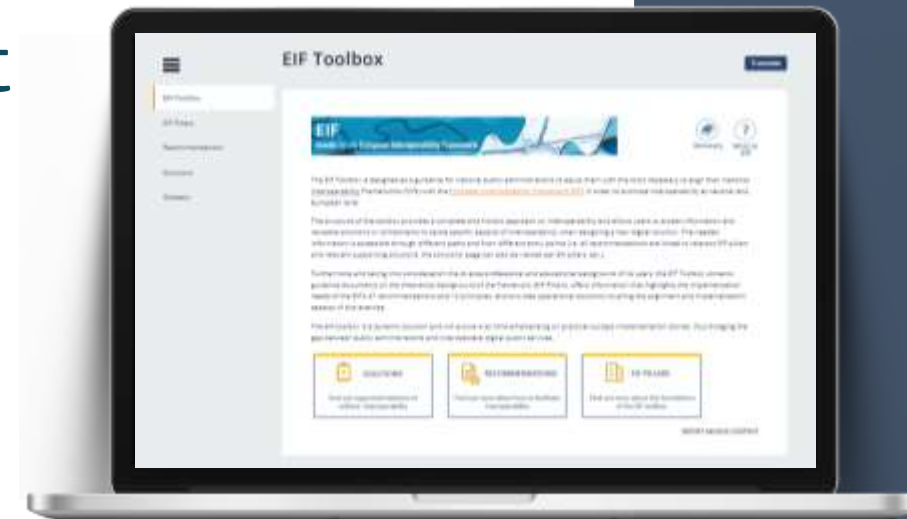

## Objectives

The European Interoperability Framework (EIF) Toolbox is an **online tool designed to provide guidance to national public administrations and equip them with the tools necessary to implement the EIF**. The main purpose of the EIF Toolbox is to provide a comprehensive approach on interoperability and allow its users to access information and reusable solutions when tackling specific aspects of interoperability or when designing a new digital service.

## Scope

The EIF Toolbox provides a mapping of the **main components of the EIF** such as recommendations on how to facilitate interoperability and the key pillars of the framework. It also encompasses solutions that can help European countries foster interoperability.

**Types of solutions:** Assessment tools | **Common frameworks** | Common services |  
Generic tools | Legal interoperability tools | Semantic assets

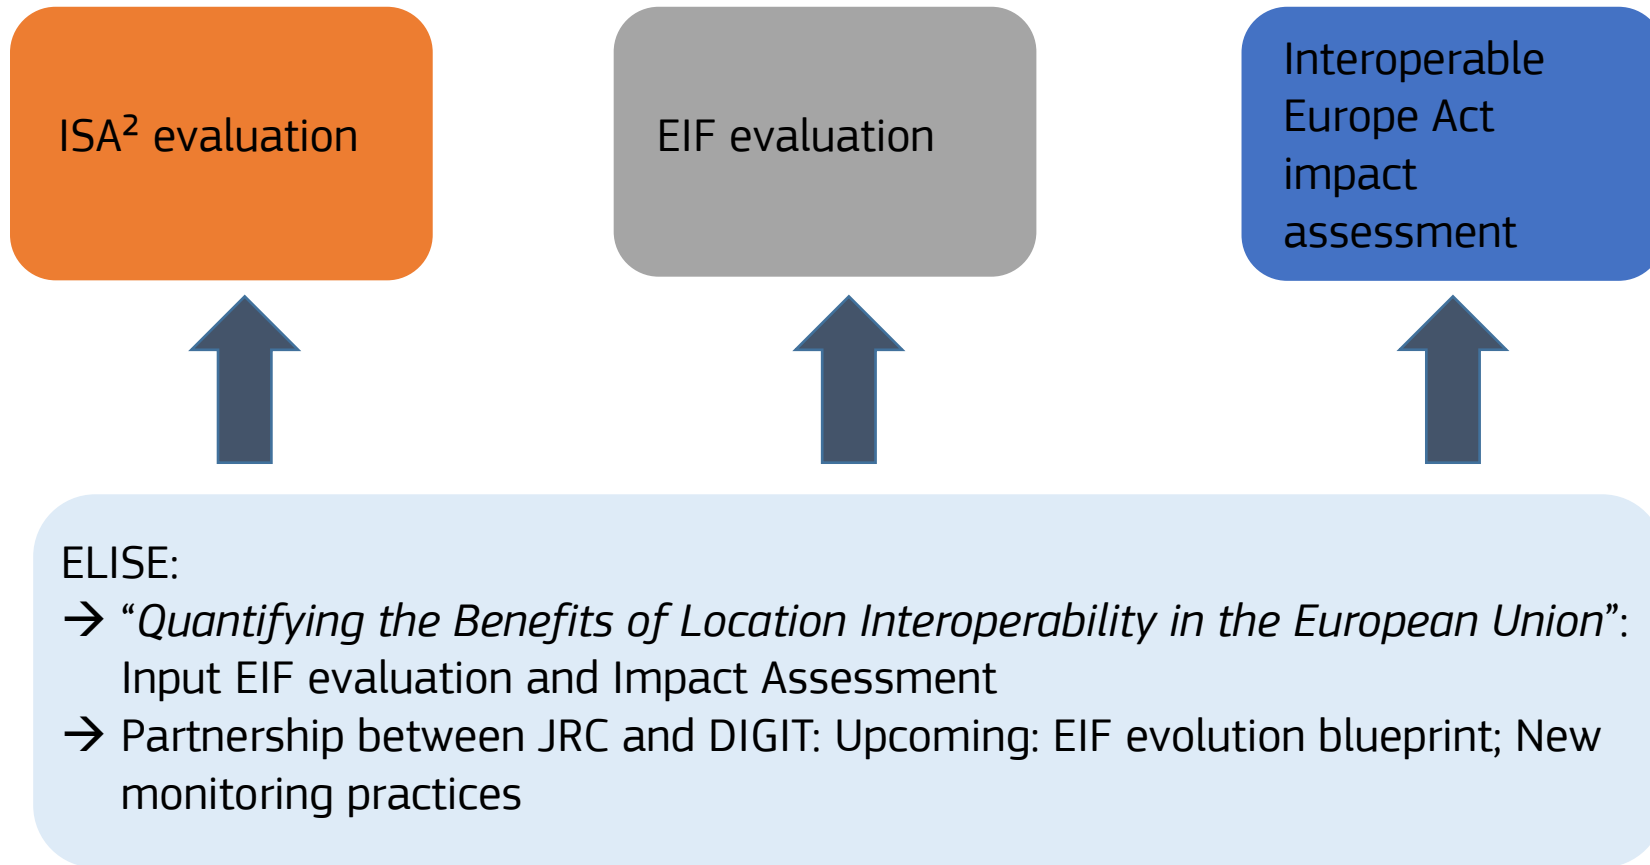

European Union  
Location Framework Blueprint

**Recommendations 11** of the EULF Blueprint encourages the reuse of relevant technical solutions where possible. **Recommendation 8** of the EULF Blueprint recommends the use of an open and *collaborative* methodology for the design and improvement of location enabled public services. It recommends designing for reuse by future collaborators. **Recommendation 19** of the EULF Blueprint on effective partnering includes partnership agreements for joint developments.

## ELISE contribution to Interoperability policy: 2022

# 3

## Emerging trends & technologies

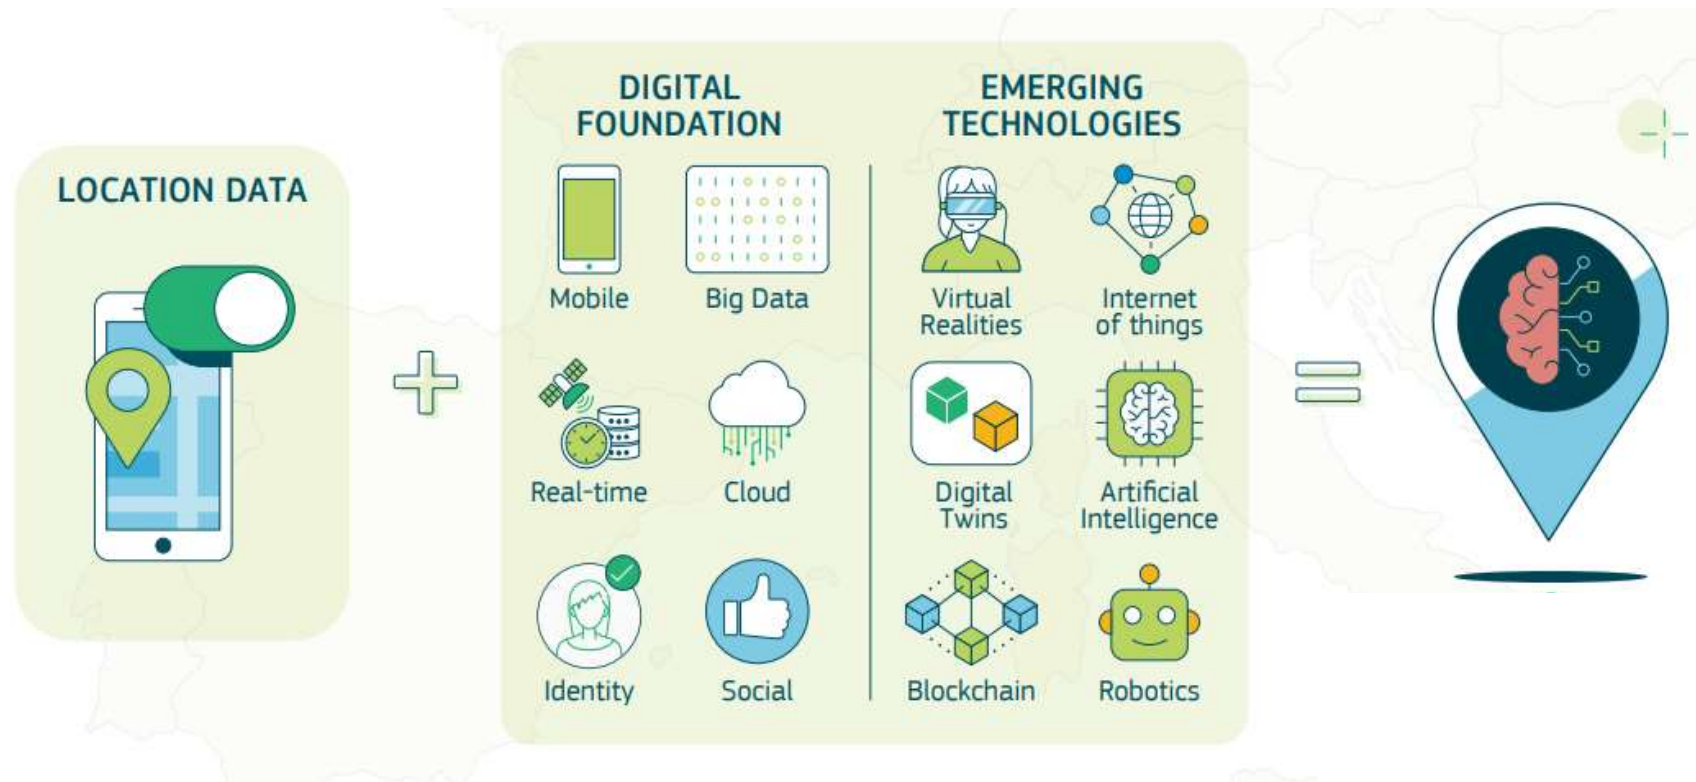

# Location Tech Trends – Top Level Categories

# Location intelligence

*Location intelligence* is the result of combining information about 'where' things are, i.e. combining location data with digital and emerging technologies.

# Location intelligence benchmarking study

## Short description

The ELISE Action has formulated the “Location intelligence benchmarking study” in which the use cases demonstrate the impact, benefits and challenges of using different technologies with location intelligence.

## Relevance/Impact

When combined with AI, location intelligence can support DGT by enabling data-driven decision-making to develop proactive and predictive map-based models using GeoAI and spatial analytics.

## MOUNTING RELEVANCE OF GeoAI

**GeoAI** uses machine learning to extract knowledge from location data and providing valuable approaches for addressing a variety of environmental and societal challenges.

Real-time  
crop yields

# Smart spaces & location intelligence

## Short description

In Portugal, the **Guimarães Urban Platform** gives a view of the urban environment which allows to monitor various indicators by displaying information in real-time

Slovenia's **Pametna Mlaka (City of Kranj)** is a "public cloud first" smart city solution, developed in a lean and agile way and in a close relationship between city council and IoT innovation companies

**Digital City of Rotterdam** is a digital Open Urban Platform with a 3D Digital Twin. The model is created using data sourced from data-streams, (IoT sensors and geospatial technologies)

## Relevance/Impact

- The importance of location data and its contribution to **public value** through location intelligence is increasing.
- Policy makers need to address the quality of data generated to ensure that the electronic devices can work together in a way to benefit ends users.
- Opportunity for innovating in the area of integration. For new systems developed in a strong interoperability setting, integration costs will likely decrease → the impact of an interoperability regulation would reach business value.

*"Smart spaces are a combination of physical and digital environments in which people and technology interact in dynamic, inter-connected and intelligent ecosystems".*

- Adapted from Gartner definition

# Success story

## Regional and local data-driven innovation through collective intelligence and sandboxing

**Marina MICHELI**  
*European Commission,  
JRC*

# Regional and local data-driven innovation through collective intelligence and sandboxing

## Objectives

- Understanding the policy implications of the adoption and development of regional and local data ecosystems on public sector innovation.
- Analysis of existing data ecosystems in various European cities and
- Experimentation - through sandboxing - of approaches, models and tools that favours the establishment and sustaining of data ecosystems at sub-national level.

## Definition of sandboxing

*In the context of this activity, “sandboxing” refers to testing solutions in a safe environment, with a focus on technical and organizational innovations that enable more efficient and effective delivery of public services through data sharing and reuse. The concept of “sandboxing” originates in the field of cybersecurity and refers to working in isolated environments separate from production. In such environments, untrusted programmes can be run safely in order to identify security risks and threats without compromising the operational production environment*

## Scope of the activity

- The Study actively involves 10 European cities, with different levels of maturity of their data ecosystems
  - ✓ Barcelona, Helsinki, Milan & Poznan
  - Data ecosystem analysis
  - *Sandboxing* experiments
    - ✓ Bordeaux, Rome & Santander
  - Data ecosystem analysis
    - ✓ Amsterdam, Ghent & Sofia
  - Validation of results

## What did the activity offer to participating cities?

- Experiment **new (technical and organisational) approaches** to share data and to leverage its potential for delivering public services within a network of European cities
- Give a practical meaning to the concept of data-driven innovation by **running experiments** and learning lessons from them (in a collaborative manner)
- **Share knowledge** and experiences with other European cities while experimenting
- Increase the ability to **create and sustain local and regional data ecosystems** for public value creation

# Poznan's sandbox

**Ambition**

**Key output**

**Key challenges**

**Key benefits**

- Poznan's sandboxing activities focused on supporting the city in its ambitions to improve management of **micro-mobility** and implementation of **Mobility-as-a-Service (MaaS)**

- The main output of the sandbox is a **dashboard** illustrating the location and status of the e-scooters of a private company (en route, broken, parked, etc.)

- **Accessing data** from the e-scooter company took more than expected (3 months)
- Internal technical **knowledge** of the administration on how to run a sandbox can improve

- Improved **management** of e-scooters in public space
- Clearer data sharing **requirements** for vendors
- Enhanced awareness of the administration on the potential of using **sandbox** to test innovative solutions for data sharing

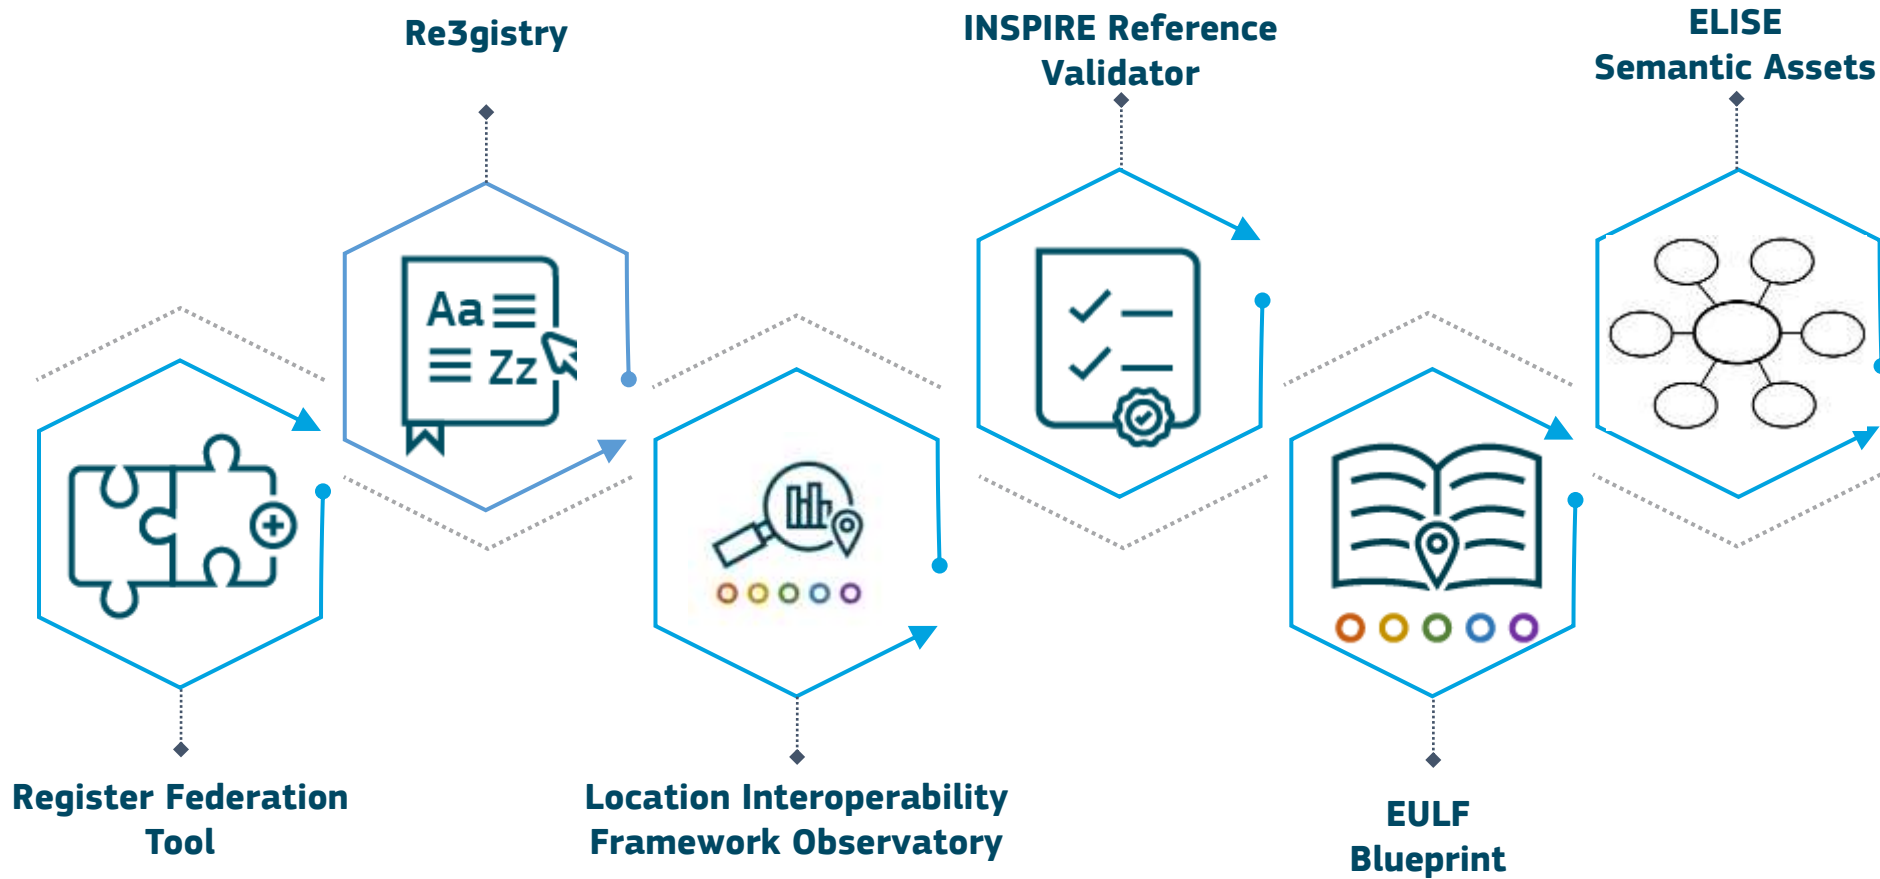

# 3

## Interoperable frameworks and solutions

# Solutions supporting location interoperability

# Focus on the INSPIRE Reference Validator

Reusable **open source tool**, based on the ETF open source testing framework

Allows **checking automatically** the correctness of data based on predefined rules

**Non-domain specific**

- **Central building block** of the INSPIRE Infrastructure
- Different member states are deploying the software
- Continuously **growing open-source community**
- More than **20 versions released** since 2018 (latest version released on 17 March 2022)

# Exploiting ELISE's solutions: *ERA, Slovenia's Surveying and Mapping Authority and ISO/TC 211*

Short description	Relevance/Impact
<p>The European Railway Agency (ERA) uses the INSPIRE RDF guidelines to model its linked data platform.</p>	<p>ERA has benefited from reusing the INSPIRE RDF guidelines in developing phase 1 successful pilot project in the Register of Railway Infrastructure (RINF)</p>
<p><b>LIFO results</b> can be used to examine current national and European status, compare countries and identify strengths and areas needing improvement</p>	<p>Slovenia has exploited LIFO as a tool to monitor and assess the State of Play of location interoperability.</p>
<p>ELISE vision has been assimilated in the <b>STRATEGIC BUSINESS PLAN - ISO/TC 211 GEOGRAPHIC INFORMATION/GEOMATICS.</b></p>	<p><b>ISO</b> echoed in its strategic business plan the vision of the EULF Blueprint developed by the ELISE Action, whereby <b>location can enable DGT.</b></p>

# Success story

## Deployment of Re3gistry with the INSPIRE Italian Registry

**Antonio ROTUNDO**

*AGID, Italy*

# Deployment of *Re3gistry* with the **INSPIRE Italia Registry**

## Challenges:

- Complying with INSPIRE requirements
- Implementing the action on controlled vocabularies
- Making available a tool for the management of reference codes at national level
- Engaging the Italian PA as register managers/owners

<https://registry.geodati.gov.it>

# INSPIRE Italian Registry – key facts

-  2017 – beta version
-  2018 – official version and linking with INSPIRE register federation (Re3gistry v. 1.3)
-  2021/22 – new version reusing Re3gistry v. 2.0
-  12 registers published and new ones planned
-  4 supported languages

## Beneficiaries

- AgID (Agency for Digital Italy), as registry manager
- National INSPIRE community
- Italian public administrations, as register managers and/or register owners
- Data providers
- Data and services users

## Benefits received

- 
- Harmonising and standardising recurrent codes in the vocabularies used for metadata, data sets and services;
  - Managing the persistent and unique identifiers of the elements used;
  - Improving data and metadata quality;
  - Managing the extensions to national code lists by local and/or regional organizations;
  - Supporting the implementation of GeoDCAT-AP;
  - Linking the geospatial domain with eGov and general public sector domain;
  - Supporting the activities on the cross-map registers.

# 3

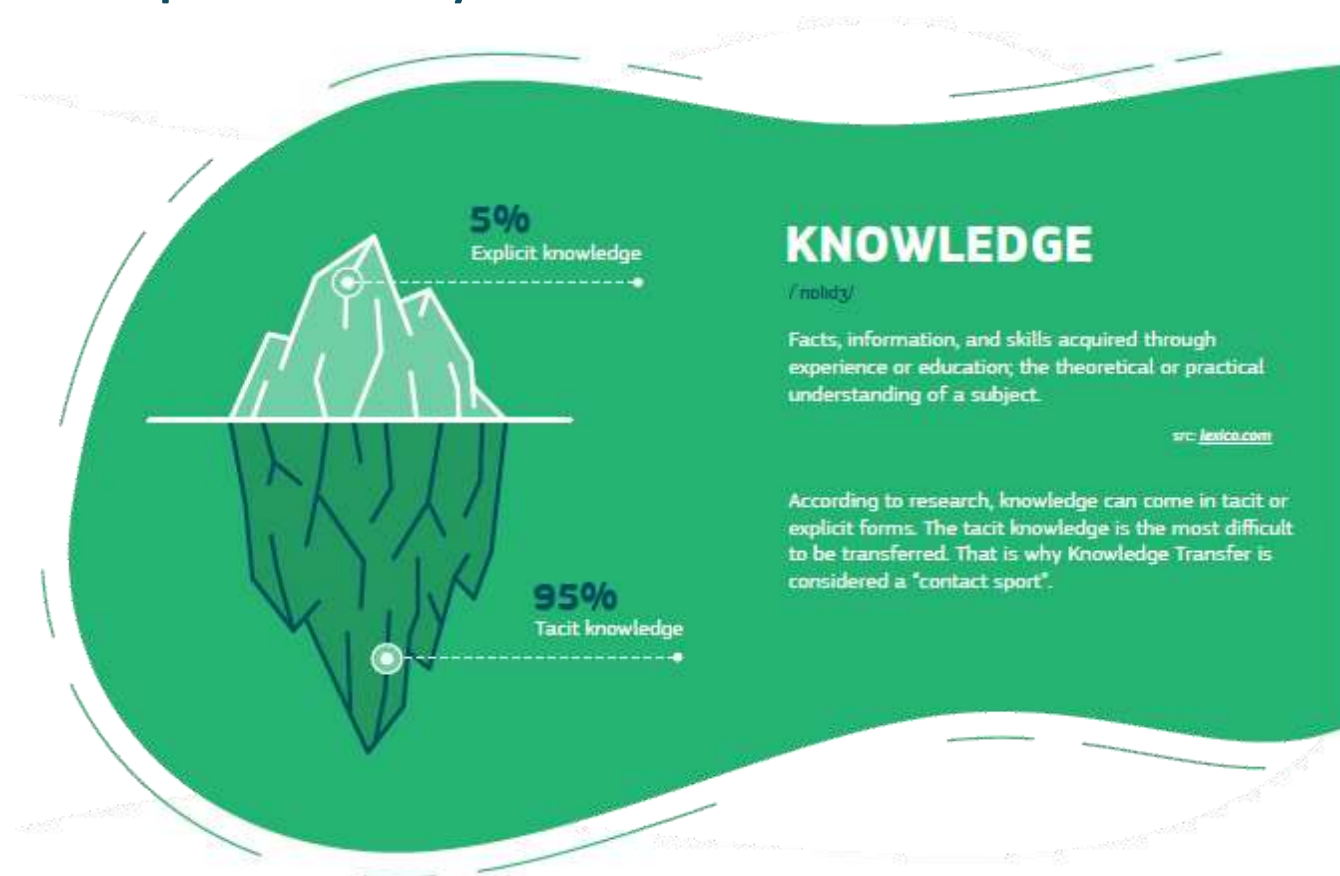

## Building a knowledge base

# Knowledge base for location interoperability

## ELISE KNOWLEDGE TRANSFER GUIDING PRINCIPLES

- ✓ Interoperability
- ✓ Reusability
- ✓ Openness
- ✓ Guidance & advice
- ✓ Capacity building & Skills
- ✓ Networking & Participation
- ✓ Collaboration & Partnerships
- ✓ Innovation & Experimentation
- ✓ Accessibility
- ✓ Transparency

# Knowledge base activities

## Short description

The **ELISE knowledge base** serves as a platform with the aim to maintain a vibrant stakeholder community.

**Webinar Series** aimed to set the scene and explore the broad role of location data as an important enabler and building block of DGT.

Promotion of “**spatial thinking**” through courses targeted to increase spatial literacy level and facilitating spatial, technical skills acquisition.

## Relevance/Impact

165 documents and 55 news items have been published on Joinup, and the platform has 152 members within its community.

Webinar series has reached many speakers and guests from: academics, research centres, institutions, policymakers, private companies, and citizens.

**These courses are designed for further dissemination**, including video lessons and quizzes at the end of the course.

# Success story

Knowledge base supporting ELISE activities fitting in the national, broader regional and global context

**Tomaž PETEK**

*Surveying and Mapping  
Authority, Slovenia*

Slovenska Strategija Pametne Specializacije

S4

# Using the EULF Blueprint and LIFO in Slovenia

# Fitting EULF Blueprint within the broader regional and global context

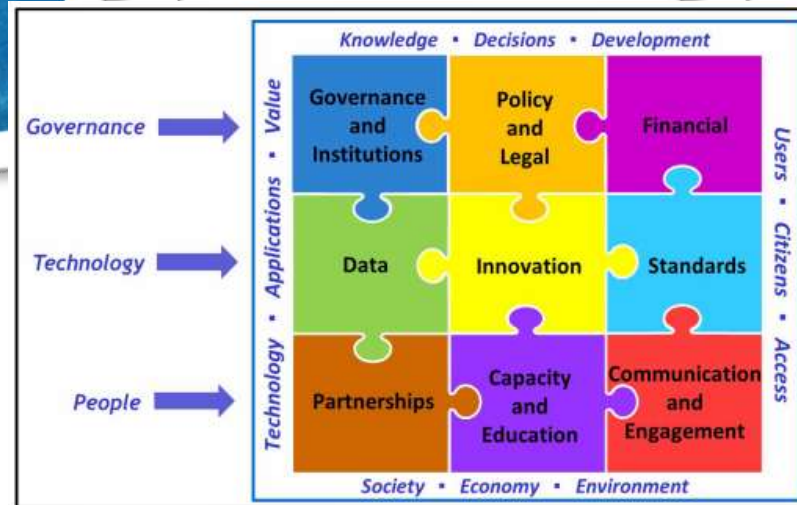

**Policy and strategy alignment**  
 a consistent EU and Member State policy and legislative approach where location information plays a significant role

**Digital government integration**  
 making location a key enabler in G2B, G2C and G2G digital government processes and systems

**Standardisation and reuse**  
 adoption of recognised geospatial and location-based standards and technologies, enabling interoperability and reuse

**Return on investment**  
 ensuring funding of activities involving location information is value for money, and taking action to stimulate innovation and growth

**Governance, partnerships and capabilities**  
 effective decision making, collaboration, knowledge and skills related to the provision and use of location information in the context of digital government

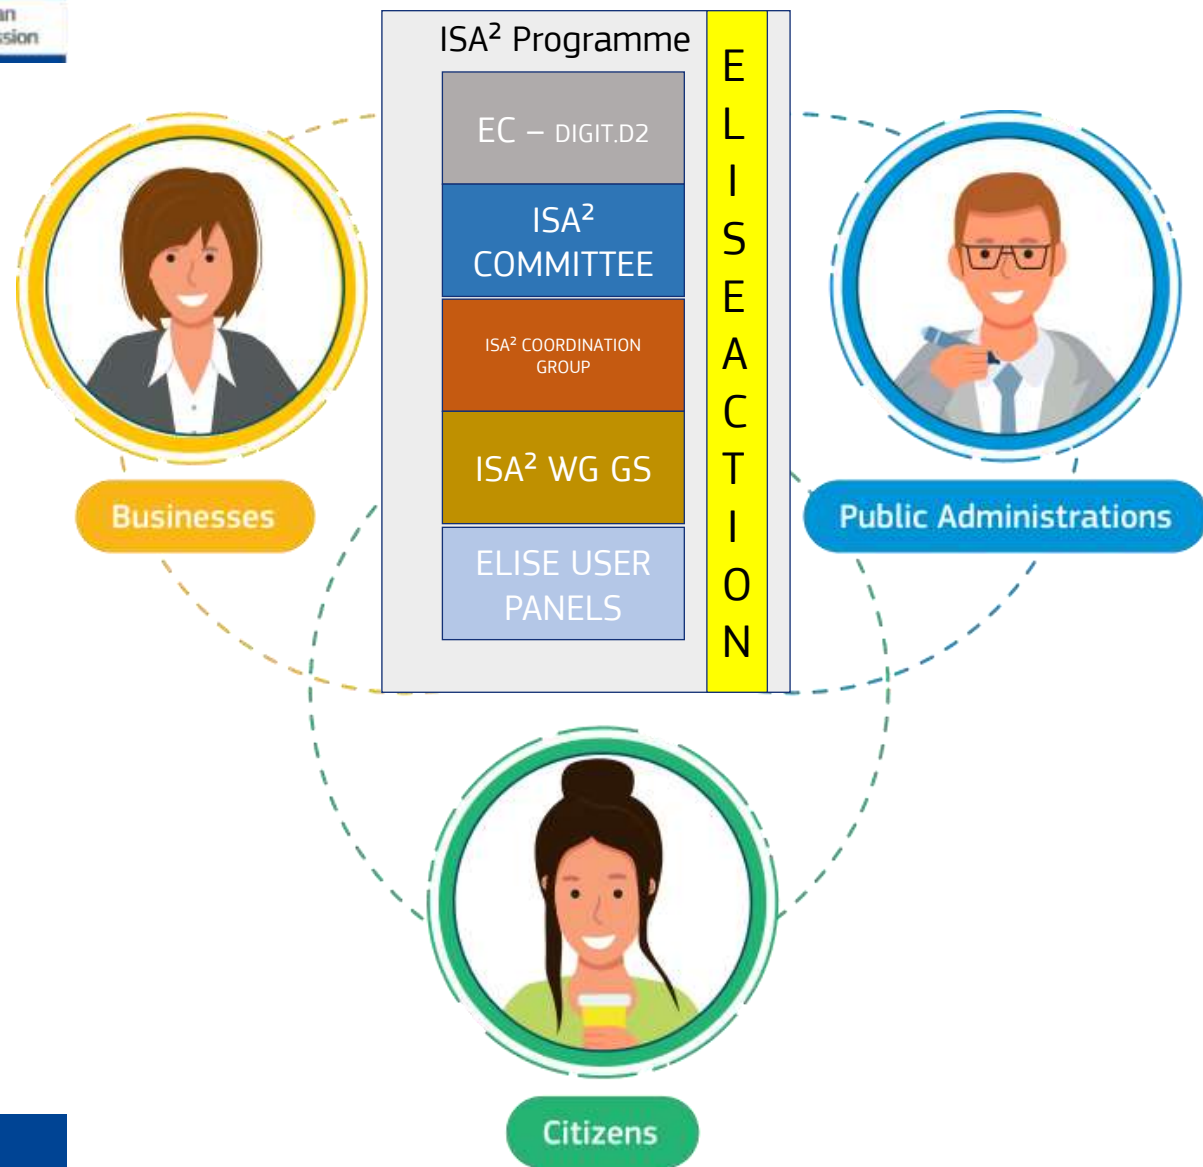

# Achieving Location Interoperability in cooperation with communities

Tweet

ELISE ISA<sup>2</sup> action @EULocation

Our first ISA2 Working Group on Geospatial Solutions meeting for 2018 was held in Brussels on 21/03/2018. Thanks to all member states for attending and contributing stimulating discussions. We look forward to the next meeting! @EU\_ISA2 @INSPIRE\_EU @EU\_Commission #ELISE\_ISA2

# 4

## Recommendations and future perspectives

*ELISE Action Community's Opinion*

## Expectations about the future

"Build on what ELISE Action has done, for example, identifying future technology trends and how the community should address them."

**Gobe HOBONA**

"Only when being interoperable, location component can be used in supporting data-driven policies."

**Ouns KISSIYAR**

**Informatie Vlaanderen**

"A systematic follow-up involving the Member States would be appreciated."

**Martin TUCHYNA**

"Maintain the relationship ELISE Action has developed with the international standards."

**Agneta ENGBERG**

## Lessons learnt

1. **Data access and sharing** policies/tools are crucial for public bodies and policymakers to harness the full potential of location data
2. Putting in place regulations and standards to ensure **data protection is essential**
3. Monitoring **emerging location technology** trends and **location intelligence**, particularly to the evolution of SDIs, is essential for a healthy basis and development of **data ecosystems**
4. **SDIs** can **support access to location data** cross-border and cross-sector through a holistic focus
5. Further **guidance** and monitoring of the progress made in advancing **location interoperability governance**
6. **Interoperability** will be key to **consistently assessing** and **identifying areas of improvement**
7. **Knowledge transfer support** remains crucial to better **exploit location interoperability** and **location enabled innovation** assets across the policy landscape for all types of stakeholders
8. Establish mutually **beneficial communities** is crucial for knowledge transfer' success to create an interactive environment that enables co-creation and open innovation

## Recommendations for further actions

1. Support the development of location-enabled data spaces to ensure the development of sustainable **data ecosystems**.
2. Carry out dedicated activities to ensure **data protection** is duly considered.
3. Updating and further developing the EULF Blueprint and associated indicators are key to furthering location interoperability maturity in Europe.
4. Developing and enhancing reusable interoperability solutions supports stakeholders to ensure location interoperability in **data ecosystems**.
5. **Building capacity at all levels** and ensuring skills development is key to ensuring the successful digital transformation of government.
6. **Continuous assessment of emerging trends and technologies** is crucial in an ever-evolving environment to deploy such GovTech solutions in the delivery of public services.
7. **Expanding the knowledge base** and engaging the growing stakeholder community is crucial to exploiting location interoperability assets.

# Future perspectives

1. **Reinforcing interoperability policy** in the public sector
2. **Digital focus**: high-performance computing; cloud, data and AI; Cybersecurity; Advanced digital skills; Accelerating the best use of technologies
3. Develop a **location data** protection framework
4. **Overcoming interoperability challenges** through piloting and sandboxing
5. **Sustainable Development Goals**: online availability of a list of 21 administrative procedures
6. Continuous **assessment of emerging trends and technologies**
7. Government audience's **geoknowledge expansion**

5

The ELISE final report:  
a brief overview

# Location Interoperability – Lessons learnt from the ELISE Action. Where next?

ELISE final report aims to show **the main highlights and findings** obtained throughout the Action activities.

**ELISE Action objective areas:** an overview is provided for the four key areas of work of the ELISE Action:

- Providing policy support,
- Assessment of emerging trends and technologies,
