For Public Administrations (A2A)

.testa.eu

Secured network for A2A connectivity

TESTA provides a secured and trusted network managed 24x7 by DIGIT, which responds to the needs of public administrations across European countries to exchange sensitive information.

With guaranteed performance levels, it allows connected stakeholders and Information Systems to interact on a trans-European scale in a safe, reliable and prompt way.

Today, TESTA EuroDomain provides secure and fully resilient connections with all existing national networks in the EU - enabling secure pan-European exchanges of data between the 27 Member States, UK, EFTA, the candidate countries and all Community Institutions and Agencies (EUIBAs).

TESTA fulfils an interoperability need for which no other alternative solution is available.

TESTA offers significant reduction in complexity in terms of setup, infrastructure and service management for the Member States. By sharing and reusing this common infrastructure and components, it allows economy of scale, synergy and reduces time to market - at no cost - for the Information Systems' owners.

Accommodating - amongst others - real time applications, it provides information confidentially and integrity by relying on EU Council-accredited devices and on security controls. By being isolated from the Internet, TESTA offers its stakeholders a reduced exposure to the increasing cybersecurity threats.

25 YEARS

The TESTA network has been successfully operated for the last 25 years and has enabled a sound organic growth and increase in relevance. Many stakeholders rely on this fully encrypted, operational & robust network.

Aligned with

The General Data Protection Regulation (EU) 2016/679 and

The Commission Decision (EU, Euratom) 2015/444 on the security rules for protecting EU classified information.
