

LOPI Empowering data Smarter Decisions Better Cities

How does a few help hundreds to understand millions?

City management involves complex processes that affect specific locations and often face conflicts among various stakeholders.

- Excessive amount of formal data, with **a lack of information about the actual needs of residents.**
- **Lack of an easy way to gather information** from residents.

Problem

LOPI is a unique combination of a survey and discussion forum with the Power of AI and Geographic Information Systems

Turning Citizen Insights into Decisions, Proven by Science and the Market.
