

[ES03] Sistema de Interconexión de Registros (SIR)

Sistema de Interconexion de Registros (SIR)	
Summary	
ID	ES03
Initiative	CTT
Short description	<p>The System for registers interconnection is the basic infrastructure that enables the exchange of record entries between public administrations.</p> <p>Through SIR, this exchange of information is carried out safely and with legal compliance, regardless of the implementation of registration used, provided that is certified in standard SICRES 3.0</p>
Owner	MINISTRY OF FINANCE AND PUBLIC ADMINISTRATION SPAIN
Contact	gestion.sir@seap.minhap.es
Type	Service
Sub-Type	Infrastructure
Context	Cross-sector
Base Registry type	All
Operating model	<p>Network service integrated in customer's applications.</p> <p>The introduction of SIR reduces the transit of paper between administrations, increasing the efficiency and eliminating the costs of handling and transfer paper, thanks to the creation of certified copies of electronic documentation submitted in the register.</p>
IPR	Not Applicable as it stated in the CTT (Spanish Centre for Technology Transfer).
Status	Operational
More details	
Aggregated business need	ABN – 8 Need for a technology solution enabling the data exchange
Functionalities	<p>To respond to these needs for improvement and efficient public administration and service to the citizen, the system of interconnection of registers was developed, as the basic infrastructure which enables the exchange of electronic records between public administrations. Through SIR, this exchange of information is carried out safely and with legal compliance, regardless of the implementation of registration used, provided that is certified in standard SICRES 3.0.</p> <p>The introduction of SIR permits to eliminate the passage of paper between administrations, increasing the efficiency and eliminating the costs of handling and transfer paper, thanks to the creation of certified electronic messages.</p> <p>Requirements and Integration modes</p> <p>OPTION 1: COMMON SERVICES</p> <p>Use of the services AWR, ORVE, GEISER or SIGM, which is also available on the Portal.</p>

	<p>OPTION 2: THROUGH THE CERTIFICATION OF THE APPLICATION FOR REGISTRATION OF THE ENTITY.</p> <p>Certified application to SICRES 3.0 and SIR allows, in addition to normal functionalities, the interconnection of registers with other integrated Administration.</p> <p>Implies a technical and economic investment by the agency concerned.</p> <p>Once adapted or implemented, it is necessary to go through the sequence of evidence of certification SICRES3.0 / SIR, in coordination with the office of MINHAP certification. As a tool to support tool, SICRES-Tester is available.</p> <p>Is also required to install the component of Registration Exchange (CIR) in the systems of the agency concerned.</p>
<p>Design/Architecture</p>	<p>Functionality</p> <p>The system gets the files of information of control in format SICRES 3.0 generated for the application of record of origin. Besides offering an interface of exchange of files of message to the application, this web service validates the file of received message, signs the information to sending, and sends the file of message to the distributed target node, notifying to the central node of the suitable conditions of traceability.</p> <p>Location</p> <p>Resides in every distributed node (CIR).</p> <p>Clients</p> <p>Applications of Record - Send the file of information of control for his distributed associate node.</p>  <pre> graph TD Ciudadano((Ciudadano)) --> 060es[060.es Registro Electrónico Común] 060es --> SIR[SIR SISTEMA DE INTERCONEXIÓN DE REGISTROS] SIR <--> ORVE[ORVE PORTAL DE ENTIDADES LOCALES] ORVE <--> Oficina[Oficina de Registro de la Entidad Local] Oficina -- DIGITALIZACIÓN --> SIR SIR <--> AGE[Administración General del Estado] AGE --- GOB[GOBIERNO DE ESPAÑA] </pre> <p>A través del Registro Electrónico Común, el ciudadano puede presentar ante la Administración cualquier solicitud, escrito o comunicación, en formato electrónico.</p> <p>SIR intercambia registros entre los organismos de la AGE.</p> <p>Las entidades locales pueden intercambiar registros a la AGE, a través de ORVE y el Portal de Entidades Locales</p>

	<div data-bbox="507 230 1289 808" data-label="Diagram"> <h3>Elementos Tecnológicos</h3> <ol style="list-style-type: none"> 1. Aplicación de Registro de Origen genera un xml en SICRES 3.0 y lo envía al CIR asociado 2. El CIR de origen inserta información de Trazabilidad del registro en el Nodo Central 3. Se transmite la información del asiento y sus anexos entre el CIR de origen y el CIR destino 4. El CIR destino inserta información de Trazabilidad del registro en el nodo central 5. Se envía el fichero recibido a la aplicación de registro destino. 6. La aplicación en destino genera un mensaje SICRES 3.0 de tipo "ACK" si la recepción es correcta 7. El fichero de mensaje se propaga por la plataforma hasta el CIR origen 8. El mensaje SICRES 3.0 llega a la aplicación origen 9. Opcionalmente las aplicaciones de registro podrán utilizar el servicio de trazabilidad del Nodo Central </div>
