In the 2022 budget plan, the government announced an [Icelandic version of an AI course](#) to be accessible free of charge for everyone, based on the AI course developed by the University of Helsinki. Additionally, on the initiative of the country's President, HE Guðni Th. Jóhannesson, and with the help of private industry, Iceland has partnered with OpenAI to use GPT-4 in the preservation effort of the Icelandic language—and to turn a defensive position into an opportunity to innovate.

During fall 2023, [a law on IT governance of the Icelandic state](#) will be presented in the Parliament (see item #21 of the mentioned law). The law will, amongst other things, mandate government institutions to use Digital Iceland's core services in their service offering.

No recent changes in infrastructures have been reported to date.

No recent changes in governance have been reported to date.
