Digital Public Administration Infographic 2023 Norway

Latest Initiatives

The Ministry of Local Government and Regional Development has published a [new Strategy for Electronic Identification \(eID\)](#). The main goals for eID and trust services are laid out in the [One Digital Public Sector strategy](#). It states that all citizens should have an eID that can be used for the services they need. All groups, including foreign nationals without a Norwegian national identity number, and children and adolescents, should be able to obtain an eID at the level they need. Individuals who are unable to act digitally themselves, must have the opportunity to be represented by a proxy.

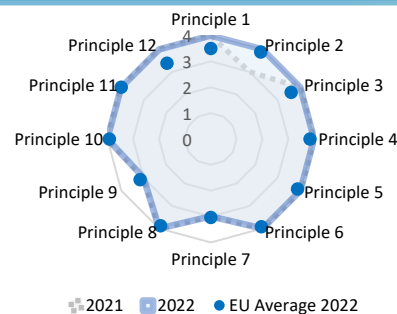

No recent changes in legislations have been reported to date.

No recent changes in infrastructures have been reported to date.

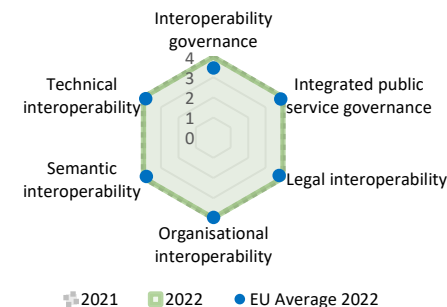

No recent changes in governance have been reported to date.
