Paris Open Source

The City's commitment to Open Source through its OSPO

A strong footprint in the open source culture

1. Why Open Source?

·Public money, public code

·Sovereignty, autonomy, reusability, a taylor-made roadmap,...

2. Development of the Lutece services platform

·A City/Administration service engine first developed in 2001, share since 2002

3. Modularity, reusability

·A strong open source culture within the development teams

·Modularity in design

4. Community management

·Limited space as operational Cityhall projects keep coming

Development and organization

1. **A platform that expands accordingly with the municipal team's roadmap**

   ·A solution based on real and evolving needs

   ·Internal team of 15 – completed with procurement of 60+ for departments projects and maintenance

   ·Strong culture of genericity, modularity and reusability

2. **A community that is challenging to bring together**

   ·Inconsistent efforts depending on the period...

   ·...despite a required technical support

3. **Contributions difficult to integrate**

   ·A few contribution guides but a hard time merging PRs

The creation of the OSPO

1. **The needs**

   · Professionalize our use and production of open source

   · Find a sustainable way to scale the Lutece community and implementations

   · Acculturate the teams on OSS

   · Build partnerships to share, swap code, learn from feedback

2. **A definition of a public-sector OSPO to be written**

   · Time to transpose from private to public sector

   · Work with peers and experts through different networks

3. **Good governance initiative methodology**

   · Contributions to the guidelines

   · Direct implementations within the City

Concrete actions and benefits...

1. **Position of the OSPO Officer**

   ·Ensures that the definition of activities is disseminated, shared and monitored

   ·Single point of contact for teams, as a facilitator, within the department, but to be extended to avoid heterogeneous practices that may be off its radar

   ·Reporting

2. **First significant steps**

   ·Launch of https://opensource.paris.fr

   ·scale Lutece and simplified adoption through the creation of CiteLibre

   ·relaunch the community with events / workshops / webinars – Translation Hackathon!

   ·support for local authorities - never been so quick and easy from 1st contact to local implementation

   ·roadmap of future solutions

   ·faster and more efficient internal PR management

   ·internal animation and acculturation

...to be maintained and sustained

1. **Current actions**

   · Complete inventory of OS bricks and their environment, and B plans

   · Communication about the tools we use

   · Contributor's guides work

   · Definition of shared governance rules
