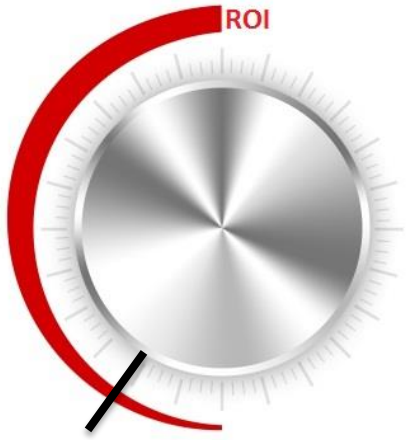
Situation



Local municipalities

- Citizens expect an effective and efficient government
- 24/7 service delivery
- Savings

Solution till now: Automation

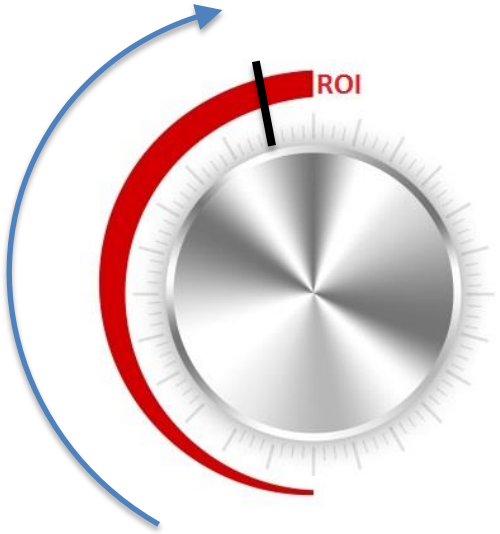
- no integrative approach : lack of coordination between actors
- No re-use of data (embedded closed systems)
- No compatible information systems
- “Hostage” by software providers

Initiatives local government

Initiatives central governement

Low adoption central initiatives
(data en processes)

Vision



- System thinking <> citizen and business organisations central
- Lower administrative costs
- Total optimisation between central and local (win-win)
- Building on good foundation (standards enriched on each level)

Vision

Freedom by good rules
central, regional and local:

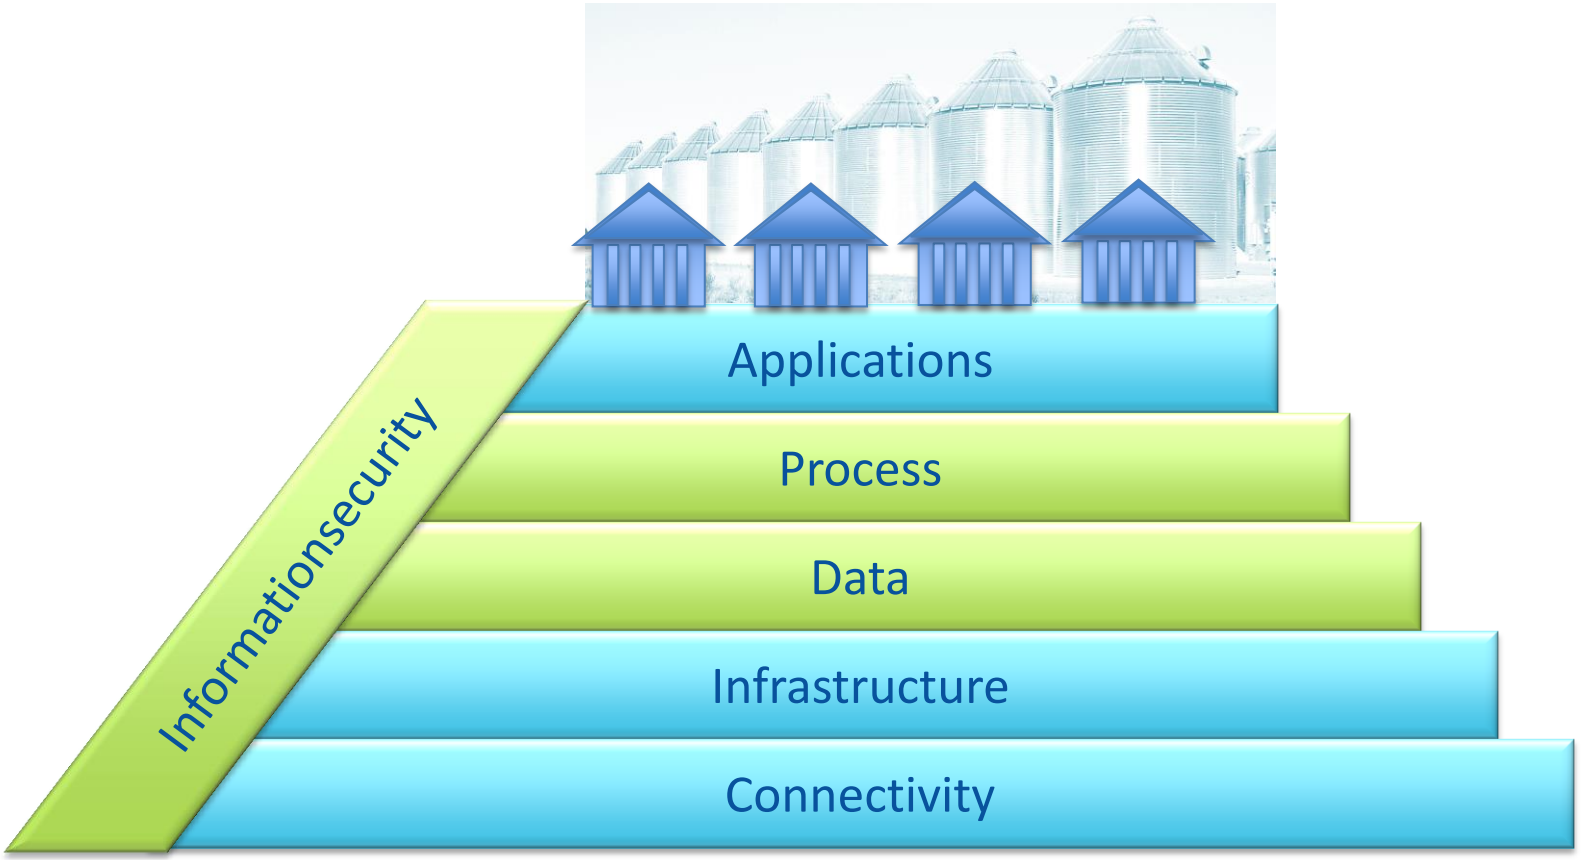
- Open Standard
- Information security
- Open Processes

VlaVirGem – as model municipality

Municipality of the future

… being build by “government” !!

Conceptuel Vision stays …



Generic components,
collective monitoring (government)

Free market

OSLO |Open Standard for Linked Authorities

1. Service delivery getting better
2. Administrative costs lower (for citizens and business)
3. Simple entrance to government
4. Basic agreements for the best foundation
